appropriate as a textbook for courses in cognitive psychology or social cognition everyday thinking reviews the rapidly

growing literature on cognition in naturalistic settings it differs from other textbooks in that where possible it focuses on thinking in real world settings rather than in controlled laboratory settings and provides detailed treatments of each of the following topics how we form impressions of and represent persons in memory how we recognize and represent faces how we reason in our day to day lives and go about solving everyday problems how we make judgments and decisions how we encode memories of events both for future action and for our own life histories and what are some of the implications of everyday knowledge and cognition for education and instruction this book presents the theoretical positions and research evidence on each of these topics and examines the generally unexplored connections among them as a result this book presents the study of cognition in a more relevant form and in a context that readers can more readily apply to their own lives

seven years after its publication in germany this book is now available to english readers in the german speaking countries the publication led to intense controversies on the significance the goals and the future development of mathematics instruction in schools currently there is much debate in many countries on how to evaluate the findings of such international comparative studies as timss and pisa debate on which consequences should be taken for designing national curricula and on which reforms of mathematics instruction in schools should be initiated i hope that this book might provide substantial suggestions beneficial to resolving these and similar issues for its major concern is twofold first to determine the essential characteristics of general education in schools and secondly on the basis of this to specify the status of mathematics instruction within the framework of general education in schools due to the fundamental nature of my argument i did not consider it necessary to update the book superficially for the english edition thus i am presenting the book to the english speaking public in its original form the single exception being that i have omitted the original second chapter since that chapter *bildung und allgemeinbildung* seems to be relevant only to those readers especially interested in german educational debates most of those readers in turn will belong to the german speaking public the omission of this chapter necessitated a few insignificant alterations in the otherwise unchanged introduction and at the beginning of the present second originally third chapter
