this graduate level textbook introduces the reader to the area of inverse problems vital to many fields including geophysical exploration system identification nondestructive testing and ultrasonic tomography it aims to expose the basic notions and difficulties encountered with ill posed problems analyzing basic properties of regularization methods for ill posed problems via several simple analytical and numerical examples the book also presents three special nonlinear inverse problems in detail the inverse spectral problem the inverse problem of electrical impedance tomography eit and the inverse scattering problem the corresponding direct problems are studied with respect to existence uniqueness and continuous dependence on parameters ultimately the text discusses theoretical results as well as numerical procedures for the inverse problems including many exercises and illustrations to complement coursework in mathematics and engineering this updated text includes a new chapter on the theory of nonlinear inverse problems in response to the field s growing popularity as well as a new section on the interior transmission eigenvalue problem which complements the sturm liouville problem and which has received great attention since the previous edition was published

this book is devoted to the mathematical theory of regularization methods and gives an account of the currently available results about regularization methods for linear and nonlinear ill posed problems both continuous and iterative regularization methods are considered in detail with special emphasis on the development of parameter choice and stopping rules which lead to optimal convergence rates

these tables represent a new revised and enlarged version of the previously published book by this author entitled tabellen zur fourier transformation springer verlag 1957 known errors have been corrected apart from the addition of a considerable number of new results which involve almost exclusively higher functions again the following tables contain a collection of integrals of the form $\int_0^{\infty} f(x) \cos xy \, dx$ fourier cosine transform $\int_0^{\infty} f(x) \sin xy \, dx$ fourier sine transform $\int_0^{\infty} f(x) e^{ixy} dx$ exponential fourier transform 00 clearly a and b are special cases of c if $f(x)$ is respectively an even or an odd function the transform parameter y in a and b is assumed to be positive while in c negative values are also included a possible analytic continuation to complex parameters y should present no difficulties in some cases the result function $g(y)$ is given over a partial range of y only this means that $g(y)$ for the remaining part of y cannot be given in a reasonably simple form under certain conditions the following inversion formulas for a b c hold $\int_0^{\infty} f(x) \cos xy \, dy = \frac{1}{2} f(x)$ $\int_0^{\infty} f(x) \sin xy \, dy = \frac{1}{2} f(x)$ $\int_0^{\infty} f(x) e^{ixy} dy = \frac{1}{2} f(x)$ in the following parts i ii iii tables for the transforms a b and c are given
