this unique text discusses the solution self assembly of block copolymers and covers all aspects from basic physical chemistry to applications in soft nanotechnology recent advances have enabled the preparation of new materials with novel self assembling structures functionality and responsiveness and there have also been concomitant advances in theory and modelling the present text covers the principles of self assembly in both dilute and concentrated solution for example micellization and mesophase formation etc in chapters 2 and 3 respectively chapter 4 covers polyelectrolyte block copolymers these materials are attracting significant attention from researchers and a solid basis for understanding their

physical chemistry is emerging and this is discussed the next chapter discusses adsorption of block copolymers from solution at liquid and solid interfaces the concluding chapter presents a discussion of selected applications focussing on several important new concepts the book is aimed at researchers in polymer science as well as industrial scientists involved in the polymer and coatings industries it will also be of interest to scientists working in soft matter self assembly and self organizing polymers

macromolecules in solution and brownian relativity illustrates the recent picture of statistical physics of polymers and polymer solutions that emerges from some paradigms of contemporary science joint together among its principal aims are discussing the consequences of a novel self diffusion theory which benefits from an extension towards relativistic like principles and the generalization of usual concepts met in polymer science in terms of geometry alone the monograph gives the whole fundamentals necessary to handle the view proposed which is set in the final chapters all the formers see about to provide the reader with a comprehensive treatation of the necessary fundamentals of classical relativistic quantum and statistical mechanics among the most important mechanical theories ever developed a chapter on the brownian movement and another on macromolecules prepare the ground that is specific to face universality and scaling behaviors in polymer solutions the scope of the book is therefore two fold on the one hand it wishes to involve the readers and scholars into a new research on polymer physics and chemistry on the other to get close chemical physicists and physical chemists to disciplines which traditionally are far from their direct fields of interest cross disciplinarity novelty potentiality
