the book describes different approaches to the analysis of heat and dynamic processes in the ocean atmospheric interface with satellite passive radiometric observations at microwaves it examines the feasibility of determining synoptic seasonal and year to year variations of sensible latent and momentum fluxes to a useful accuracy using the dmssp ssm i and eos aqua amsr e data directly from the measured brightness temperatures an important object in the studies is the north atlantic with emphasize on the areas with high midlatitude cyclon activity here the main results have been obtained by combining data from the vessel experiments newfouex 88 atlantex 90 and the data of microwave radiometers from the dmssp and eos aqua satellites the role of vertical turbulent and horizontal advective heat transfer in forming interrelations between the brightness temperature of the system ocean atmosphere and surface heat fluxes in the range of synoptic time scales is analyzed special sections of the book describe some results of analysis of reaction of the system ocean atmosphere on passing of the tropical cyclone katrina august 2005 in the florida strait as well as a behavior of the system in the period of a time preceding to origination the cyclone humberto september 2007 in the mexico gulf the long term goal of this research is the search for effects

and regularities which can explain the reasons for the tropical cyclones appearance some characteristics of the tropical cyclones brightness temperature and heat contrasts etc are compared with those for midlatitude cyclones at the same time as covering a key topic area with implications for global warming research this text is also usefull to students who want to gain insight into application of satellite microwave radiometric methods for studying the air sea interaction key themes microwave radiometry air sea interaction midlatitude and tropical cyclones atmosphere boundary layer heat and momentum surface fluxes

automation is undergoing a major transformation in scope and dimension and plays an increasingly important role in the global economy and in our daily lives engineers combine automated devices with mathematical and organizational tools to create complex systems for a rapidly expanding range of applications and human activities this handbook incorporates these new developments and presents a widespread and well structured conglomeration of new emerging application areas of automation besides manufacturing as a primary application of automation the handbook contains new application areas such as medical systems and health transportation security and maintenance service construction and retail as well as production or logistics this springer handbook is not only an ideal resource for automation experts but also for people new to this expanding field such as engineers medical doctors computer scientists designers it is edited by an internationally renowned and experienced expert

upon its initial publication the circuits and filters handbook broke new ground it quickly became the resource for comprehensive coverage of issues and practical information that can be put to immediate use not content to rest on his laurels in addition to updating the second edition editor wai kai chen divided it into tightly focused texts that made the information easily accessible and digestible these texts have been revised updated and expanded so that they continue to provide solid coverage of standard practices and enlightened perspectives on new and emerging techniques passive active and digital filters provides an introduction to the characteristics of analog filters and a review of the design process and the tasks that need to be undertaken to translate a set of filter specifications into a working prototype highlights include discussions of the passive cascade synthesis and the synthesis of lcm and rc one port networks a summary of two port synthesis by ladder development a comparison of the cascade approach the multiple loop feedback topology and ladder simulations an examination of four types of finite wordlength effects and coverage of methods for designing two dimensional finite extent impulse response fir discrete time filters the book includes coverage of the basic building blocks involved in low and high order filters limitations and practical design considerations and a brief discussion of low voltage circuit design revised chapters sensitivity and selectivity switched capacitor filters fir filters iir filters vlsi implementation of digital filters two dimensional fir filters additional chapters 1 d multirate filter banks directional filter banks nonlinear filtering using statistical signal models nonlinear filtering for image denoising video demosaicking filters this volume will undoubtedly take its place as the engineer s first choice in looking for solutions to problems encountered when designing filters

there will always be a need for professionals to work collaboratively if they are to provide the highest standard of care interprofessional working encourages practitioners to understand the roles of other professionals and to learn from each other as well as from service users and carers to ensure the full benefit of this collaboration is realised it is an essential element of both education and practice for today s professionals interprofessional working in health and social care discusses the rationale skills and conditions required for interprofessional working in addition it provides an overview of the roles and perspectives of different health professionals across a broad range of expertise education housing medicine midwifery nursing occupational therapy physiotherapy police probation radiography social work and youth work the second edition offers a broad variety of case studies from a range of fi elds and settings includes a new chapter dedicated to interprofessional working with service users and carers looks forward offering brand new content on new and emerging roles such as specialist paramedics and approved mental health practitioners this book is a valuable tool for students and practitioners across the health and social care discipline employing engaging case studies and reflective activities to support learning about interprofessional and interagency collaboration erratum please note the term approved mental health practitioner has been used in error instead of approved mental health professional this will be corrected as soon as possible on the next reprint and the e book version has been corrected

item response theory irt has moved beyond the confines of educational measurement into assessment domains such as personality psychopathology and patient reported outcomes classic and emerging irt methods and applications that are revolutionizing psychological measurement particularly for health assessments used to demonstrate treatment effectiveness are reviewed in this new volume world renowned contributors present the latest research and methodologies about these models along with their applications and related challenges examples using real data some from nih promis show how to apply these models in actual research situations chapters review fundamental issues of irt modern estimation methods testing assumptions evaluating fit item banking scoring in multidimensional models and advanced irt methods new multidimensional models are provided along with suggestions for deciding among the family of irt models available each chapter provides an introduction describes state of the art research methods demonstrates an application and provides a summary the book addresses the most critical irt conceptual and statistical issues confronting researchers and advanced students in psychology education and medicine today although the chapters highlight health outcomes data the issues addressed are relevant to any content domain the book addresses irt models applied to non educational data especially patient reported outcomes differences between cognitive and non cognitive constructs and the challenges these bring to modeling the application of multidimensional irt models designed to capture typical performance data cutting edge methods for deriving a single latent dimension from multidimensional data a new model designed for the measurement of constructs that are defined on one end of a continuum such as substance abuse scoring individuals under different multidimensional irt models and item banking for patient reported health outcomes how to evaluate measurement invariance diagnose problems with response categories and assess growth and change part 1 reviews fundamental topics such as assumption testing

parameter estimation and the assessment of model and person fit new emerging and classic irt models including modeling multidimensional data and the use of new irt models in typical performance measurement contexts are examined in part 2 part 3 reviews the major applications of irt models such as scoring item banking for patient reported health outcomes evaluating measurement invariance linking scales to a common metric and measuring growth and change the book concludes with a look at future irt applications in health outcomes measurement the book summarizes the latest advances and critiques foundational topics such a multidimensionality assessment of fit handling non normality as well as applied topics such as differential item functioning and multidimensional linking intended for researchers advanced students and practitioners in psychology education and medicine interested in applying irt methods this book also serves as a text in advanced graduate courses on irt or measurement familiarity with factor analysis latent variables irt and basic measurement theory is assumed

the book is composed of 12 chapters and three appendices and can be divided into four parts the first part includes chapters 2 to 7 which discuss the concepts models methods and data in probabilistic transmission planning the second part chapters 8 to 11 addresses four essential issues in probabilistic transmission planning applications using actual utility systems as examples chapter 12 as the third part focuses on a special issue i e how to deal with uncertainty of data in probabilistic transmission planning the fourth part consists of three appendices which provide the basic knowledge in mathematics for probabilistic planning
