methyl tert butyl ether mtbe is currently the leading contaminant of groundwater in the united states the widespread presence of mtbe along with its degradation by product tert butyl alcohol tba in groundwater has created great concern in the scientific community because mtbe and tba are suspected as possible human carcinogens in this research the degradation of mtbe and tba in aqueous solution by o33 uv process has been investigated laboratory studies were conducted using a semi batch reactor under various experimental conditions i e incident uv light intensity influent ozone gas concentration and water quality in terms of varying bicarbonate concentration furthermore the o33 uv process was modeled by using oxalic acid as a probe chemical oxalic acid was oxidized by o33 uv process under various experimental conditions and the model successfully predicted the residual concentration of oxalic acid in order to understand the degradation mechanisms of mtbe and tba a comprehensive kinetic model that describes the degradations of mtbe tba and their intermediates by o33 uv process was proposed the model was calibrated using experimental data on mtbe and tba spiked in synthetic solution an attempt was made to verify the kinetic model using different sets of experimental data the model predicted well the removal of mtbe and tba however the accumulation and decay of some primarily intermediates were predicted with slight variations finally real groundwater samples contaminated with mtbe and tba were oxidized by o33 uv process under various experimental conditions it was observed that the removal rate of mtbe and tba was reduced by the presence of other gasoline components such as btex furthermore for groundwater

sample without iron the kinetic model predicted the degradation of mtbe as well as accumulation and decay of reaction intermediates with slight variations in conclusion this research provides valuable information on the degradation mechanisms of mtbe tba and their intermediates the o33 uv process was very successful in degrading mtbe and tba in aqueous solution moreover it was observed that the reaction intermediates react well in the o33 uv process and complete mineralization could be achieved if desired
