the term picture archiving and communications system pacs was initiated during the first international conference and workshop on the topic sponsored by the international society for optical engineering spie in newport beach california in 1982 the research and development r d progress for pacs has been slow until 1988 the earlier pacs modules were mostly off the shelf components connected together to solve a very specific clinical problem the three major players in pacs r d are the european countries united states of america and japan for various reasons the european countries concentrated in modeling and simulation u s a preferred in house development or purchased pacs modules from a manufacturer whereas japan organized the pacs as a national project between 1989 and 1990 pacs r d took a dramatic positive turn large scale pacs projects were planned and some are of implementation especially in newly constructed hospitals examples are the hokkaido university japan hammersmith hospital united kingdom social and medical center east smyso vienna austria the u s armed force medical diagnostic imaging support mdis project and the ucla medical plaza ambulatory care center another phenomenon is the organization of the ec countries which provides a tremendous impetus for the european pacs r d efforts this book hospital integrated picture archiving and communication systems edited by professor m osteaux and others is a direct product from these efforts

imaging informatics is a complex and historically rapidly changing field knowledge of which is central to the practice of all imaging specialists this convenient pocket guide provides the foundations of knowledge in informatics allowing radiographers in training and in practice assistant practitioners and other allied health professionals to understand use and develop more efficient ways of imaging that will in turn deliver improved patient care

the medical diagnostic imaging support mdis system is a project to install picture archive and communications systems pacs and teleradiology in selected u s military medical treatment facilities mtf the mdis specifications are based on the results of three years of university and military research and development through the digital imaging network systems dins project and the tactical air command teleradiology project mdis functional specifications were compiled by a team of radiologists physicists clinical engineers hospital administrators technologists and computer systems specialists the contract was awarded to a joint venture between loral and siemens corporations in september 1991 presently madigan army medical

center brooke army medical center and wright patterson air force medical center are undergoing phased implementation of this system additional sites are planned for 1993 1994 including hospitals in the continental u s hawaii and korea

both engineers and physicians present possible tools of integration in order to build an iscam a radiologist who wants to acquire a pacs or a mathematician asking for pertinent applications of image processing techniques will find recent information guiding their choice in research or in acquisition of imaging or computing devices of a hospital information system

three decades have passed since my first personal experiences influences and contacts with computer applications in the field of medicine these experiences were influenced by diverse presentations publications and seminars concerning various applications of information technology as early as in 1970 univac inter national executive centre rome the first clinical proposals and discussions during the first world congress of intensive care medicine london 1974 strongly impressed me since they demonstrated that the future of medicine would be changed rapidly by the use of computer technology in 1975 when i started my radiology residency my clinical and academic interests were focused on two major topics i interventional radiology and the clinical responsibility of the radiologist for the patient and ii the improvement of radiological services for both the clinician and the patient through the use of digital technology these two topics firstly interventional radiology and secondly computer technology along with all digital techniques developed in respect to examinations and modalities have been the basis for my personal evolution of medicine especially of digital radiology

this is the second edition of a well received book that enriches the understanding of radiographers and radiologic technologists across the globe and is designed to meet the needs of courses units on radiographic imaging equipment procedures production and exposure the book also serves as a supplement for courses that address digital imaging techniques such as radiologic physics radiographic equipment and quality control in a broader sense the purpose of the book is to meet readers needs in connection with the change from film based imaging to film less or digital imaging today all radiographic imaging worldwide is based on digital imaging technologies the book covers a wide range of topics to address the needs of members of various professional radiologic technology associations such as the american society of radiologic technologists the canadian association of medical radiation technologists the college of radiographers in the uk and the australian and new zealand societies for radiographers
