advanced differential equations appear in several applications especially as mathematical models in economics an advanced term may for example reflect the dependency on anticipated capital stock this book also deals with nonoscillation properties of scalar advanced differential equations some new oscillation and nonoscillation criteria are given for linear delay or advanced differential equations with variable coefficients and not necessarily constant delays or advanced arguments the present book has been written in the light of the latest syllabi of several universities the subject matter has been presented in such a way that it is easily accessible to students the method of presentation is very clear and lucid which can be easily followed by the students the contents conform to the specified syllabi and are so structured as to enable the student to move easily from the fundamental to the complex it is our earnest hope that this book will be of great value to all our students

this book seeks to define the field of humanitarian medicine it gathers new and previously published articles and speeches that set out the principles of humanitarian medicine starting with the idea of health as a human right and examining topics such as quality of life torture and nuclear conflict the book takes a historical view and its contributors include nobel laureates kofi annan and joseph rotblat

short historical overview in the 1940s two phenomena in the field of cosmic rays forced scientists to think that the sun is a powerful source of high energy particles one of these was discovered because of the daily solar variation of cr which the maximum number of cr observed near noon referring to the existence of continuous ux of cr from the direction of the sun this became the experimental basis of the theory that cr s originate from the sun or for that matter from within the solar system alfvén 1954 the second phenomenon was discovered when large uxes of high energy particles were detected from several solar arcs or solar cr these are the called ground level events gle and were first observed by ionization chambers shielded by 10 cm pb and detected mainly from the secondary muon component cr that they caused during the events of the 28th of february 1942 the 7th of march 1942 the 25th of july 1946 and the 19th of november 1949 the biggest such event was detected on the 23rd of february 1956 see the detailed description in chapters x and xi of dorman m1957 the first phenomenon was investigated in detail in dorman m1957 by first correcting experimental data on muon temperature effects and then by using coupling functions to determine the change in particle energy caused by the solar diurnal cr variation

during the 1950s leading american scientists embarked on an unprecedented project to remake high school science education dissatisfaction with the soft school curriculum of the time advocated by the professional education establishment and concern over the growing technological sophistication

of the soviet union led government officials to encourage a handful of elite research scientists fresh from their world war ii successes to revitalize the nations science curricula in scientists in the classroom john l rudolph argues that the cold war environment long neglected in the history of education literature is crucial to understanding both the reasons for the public acceptance of scientific authority in the field of education and the nature of the curriculum materials that were eventually produced drawing on a wealth of previously untapped resources from government and university archives rudolph focuses on the national science foundation supported curriculum projects initiated in 1956 what the historical record reveals according to rudolph is that these materials were designed not just to improve american science education but to advance the professional interest of the american scientific community in the postwar period as well
