this original and exciting study offers a completely new perspective on the philosophy of mathematics most philosophers of mathematics try to show either that the sort of knowledge mathematicians have is similar to the sort of knowledge specialists in the empirical sciences have or that the kind of knowledge mathematicians have although apparently about objects such as numbers sets and so on isn't really about those sorts of things at all jody azzouni argues that mathematical knowledge is a special kind of knowledge that must be gathered in its own unique way he analyzes the linguistic pitfalls and misperceptions philosophers in this field are often prone to and explores the misapplications of epistemic principles from the empirical sciences to the exact sciences what emerges is a picture of mathematics sensitive both to mathematical practice and to the ontological and epistemological issues that concern philosophers the book will be of special interest to philosophers of science mathematics logic and language it should also interest mathematicians themselves

philosophy of mathematics today has transformed into a very complex network of diverse ideas viewpoints and theories sometimes the emphasis is on the classical foundational work often connected with the use of formal logical methods sometimes on the sociological dimension of the mathematical research community and the products it produces then again on the education of future mathematicians and the problem of how knowledge is or should be transmitted from one generation to the next the editors of this book felt the urge first of all to bring together the widest variety of authors from these different domains and secondly to show that this diversity does not exclude a sufficient number of common elements to be present in the eyes of the editors this book will be considered a success if it can convince its readers of the following that it is warranted to dream of a realistic and full fledged theory of mathematical practices in the plural if such a theory is possible it would mean that a number of presently existing fierce oppositions between philosophers sociologists educators and other parties involved are in fact illusory
