excerpt from a class book of physical geography physical geography as a school subject is concerned properly with those aspects of the earth which determine or influence the life of man it necessarily touches other departments of natural knowledge at many points but in the following lessons the contributory sciences of astronomy geology meteorology and physics are introduced only to the extent necessary to make clear some of the more obvious ways in which human life is affected by natural phenomena educationally regarded geography is a practical science practical since it cannot be studied satisfactorily without the personal performance of observational and experimental exercises designed to lead the student to discover for himself fundamental facts and principles a science in that the data with which it deals can be applied convincingly to man's needs only when their place in an orderly sequence of cause and effect is duly appreciated the practical exercises set out at the beginning of the various sections of the book have been framed to lead each student to become within the limits of the course of study an independent observer able to reason intelligently on the facts he encounters the descriptive text which follows each set of exercises provides a means of checking the results obtained and the conclusions arrived at by the student it is urged that although the descriptive portions of the volume will be found complete as a text book much of the educational value of their study will be lost by students who neglect the practical work about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work
