the intention of this book is to provide an impression of all aspects of photovoltaics. It is not just about physics and technology or systems but it looks beyond that at the entire environment in which PV is embedded. The first chapter is intended as an introduction to the subject. It can also be considered an executive summary. Chapters 2-4 describe very briefly the basic physics and technology of the solar cell. The silicon cell is the vehicle for this description because it is the best understood solar cell and also has the greatest practical importance. A reader who is not interested in the physical details of the solar cell can skip chap 2 and still understand the rest of the book in general. It was the intention of the authors to keep the book at a level that does not require too much previous knowledge of photovoltaics. Chapter 5 is devoted to other materials and new concepts presently under development. For consideration it intends to provide an impression of the many possibilities that exist for the conversion of solar radiation into electricity by solid state devices. These new concepts will keep researchers occupied for decades to come. Chapter 6 gives an introduction to cell and module technology and also informs the reader about the environmental compatibility and recycling of modules. The following chapters are devoted to practical applications. Chapters 7 and 8 introduce systems technology for different applications. The environmental impact of PV systems and their reliability is the subject of chap 9.

I have great pleasure in presenting the proceedings of the 10th European Photovoltaic Solar Energy Conference held in Lisbon from 8 to 12 April 1991. These proceedings contain all the scientific papers delivered at the conference. The following is a short summary of the conference activities. The conference was opened by the Minister of Industry and Energy of Portugal, Eng. Luis Mira do Amaral, at the opening ceremony. The Becquerel Prize created by the Commission of the European Communities was awarded to Professor Werner Bloss of the University of Stuttgart and presented by Professor Philippe Bourdeau, Director at the Directorate General for Science Research and Development. The Becquerel Lecture delivered by Professor Bloss constituted the scientific opening to the conference. About 760 delegates from 53 countries presented around 350 contributions. 50 of them as plenary lectures. The contributions were selected among the many papers submitted this time more strictly than ever before. Also a selected group of scientists were invited to deliver 15 review lectures to provide an adequate context to the contributions to the conference. A symposium on photovoltaics in developing countries which was very well attended took place as a parallel event. The symposium provided an opportunity to hear not only experts of the industrialized countries but also speakers from the countries where photovoltaics provides services of paramount value.

Proceedings of a workshop held by the Asian Development Bank in Manila, Philippines, Feb 20-23, 1996, to assess the current state of solar photovoltaic PV technology and its feasibility for power generation in the next 10-15 years. The study also reviewed the role of bilateral agencies, multilateral institutions such as the bank and the World Bank, national governments, public
