the graphical user interface gui as the most prevailing type of user interface ui in today s interactive applications restricts the interaction with a computer to the visual modality and is therefore not suited for some users e g with limited literacy or typing skills in some circumstances e g while moving around with their hands or eyes busy or when the environment is constrained e g the keyboard and the mouse are not available in order to go beyond the gui constraints the multimodal mm uis appear as paradigm that provide users with great expressive power naturalness and flexibility in this thesis we argue that developing mm uis combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of a set of models a method manipulating these models and the tools implementing the method therefore we define a design space based method that is supported by model to model colored transformations in order to obtain mm uis of information systems the design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort the feasibility of the methodology is

demonstrated through three case studies with different levels of complexity and coverage in addition an empirical study is conducted with end users in order to measure the relative usability level provided by different design decisions

fundamentals of information systems second edition continues to offer concise nine chapter overview of information systems information technologies and the strategies for managing them change quickly but the principles that guide both

often remain timeless these principles form the backbone of this comprehensive survey of the field designed for a student's first course in information technology by presenting the details and the big picture. Ralph Stair and George Reynolds put the lessons of managing information systems into an understandable context. This new second edition offers completely updated coverage as well as an increased focus on the effects of globalization. Readers get the necessary foundation in information systems, a base needed by every businessperson regardless of his or her specialization.

This book provides the most current and comprehensive overview available today of the critical role of information systems in emergency response and preparedness. It includes contributions from leading scholars, practitioners, and industry researchers and covers all phases of disaster management: mitigation, preparedness, response, and recovery. Foundational chapters provide a design framework and review ethical issues. Context chapters describe the characteristics of individuals and organizations in which EMIS are designed and studied. Case study chapters include systems for distributed microbiology laboratory diagnostics to detect possible epidemics or bioterrorism, humanitarian MIS, and response coordination systems. Systems design and technology chapters cover simulation, geocollaborative systems, global disaster impact analysis, and environmental risk analysis. Throughout the book, the editors and contributors give special emphasis to the importance of assessing the practical usefulness of new information systems for supporting emergency preparedness and response rather than drawing conclusions from a theoretical understanding of the potential benefits of new technologies.

Information systems research relevant theory and informed practice comprises the edited proceedings of the WG8.2 conference relevant theory and informed practice looking forward from a 20-year perspective on IS research, which was sponsored by IFIP and held in Manchester, England, in July 2004. The conference attracted a record number of high-quality manuscripts, all of which were subjected to a rigorous reviewing process in which four to eight track chairs, associate editors, and reviewers thoughtfully scrutinized papers by the highly regarded as well as the newcomers. No person or idea was considered sacrosanct, and no paper made it through this process unscathed. All authors were asked to revise the accepted papers, some more than once. Thus, good papers got better, with only 29 percent of the papers accepted. These proceedings are significantly more selective than is typical of many conference proceedings. This volume is organized in 7 sections with

33 full research papers providing panoramic views and reflections on the information systems discipline followed by papers featuring critical interpretive studies action research theoretical perspectives on research and the methods and politics of its development also included are 6 panel descriptions and a new category of bright idea position papers 11 in all wherein main points are summarized in a pithy and provocative fashion
