it is often said that everyone understands precisely what is meant by the notion of probability except those who have spent their lives studying the matter upon close scrutiny the intuitively obvious idea of probability becomes quite elusive is it a subjective or objective concept are random variables simply improperly measured deterministic variables or inherently random what is meant by the phrase other things held constant that often appears in descriptions of probability these questions involve fundamental philosophical and scientific issues and promise to elude definitive answers for some time the same type of difficulty arises when attempting to produce a volume on microeconomic theory the obvious first question what is microeconomic theory

in spatial microeconomics melvin l greenhut argues that sellers in a space economy have the power to set prices and that this power stems naturally from the geographic separation of markets focusing on differentiated markets this collection of his acclaimed essays reveals that even the pricing of services electrical power and many other goods although not distance related per se can be analysed from a spatial perspective professor greenhut demonstrates and empirically indicates how and why modern firms price heterogeneously over differentiated markets the spatial framework sheds light on the impact of mergers and antitrust legislation as well as on international trade and other issues these essays are intended to revitalize neoclassical microeconomics by adding a spatial dimension and so making purely and monopolistically competitive frameworks irrelevant no other collection of essays points uniquely to the need to reformulate microeconomics on the basis of time and space spatial microeconomics and its companion volume location economics will be welcomed by students teachers and practitioners of economics for improving access to professor greenhut s many important essays and

in recent years innovative texts in mathematics science foreign languages and other fields have achieved dramatic pedagogical gains by abandoning the traditional encyclopedic approach in favor of teaching a shorter list of core principles in depth two well respected writers and researchers bob frank and ben bernanke have shown that the less is more approach affords similar gains in introductory economics the authors introduce a coherent short list of core principles and reinforce them by illustrating and applying each in numerous contexts students are periodically asked to apply these principles and to answer related questions and exercises the brief editions were developed for instructors who appreciate core principles approach and desire a more manageable amount of content and slightly less rigor in the brief editions the authors made careful choices of material to eliminate and condense in order to produce of more concise coverage

the origin of this work is to be found in the cyclostyled course on the optimal allocation of resources in the firm and in the nation taught by mr boiteux at the centre d etudes des programmes economiques c e p e paris from 1957 to 1960 of course several successive later rewritings and a great many additions have profoundly altered the initial version starting from a remarkably clear and concise exposition of economic theory we have ended with a book that is several hundred pages long it is not at all certain that mr boiteux would recognise this intellectual sponsorship nor is it certain that the gain in information justifies such an increase in size however that may be the initial plan has survived without mr boiteux this book would never have been undertaken it is a pleasant duty for us respectfully to acknowledge our debt to him here microeconomic analysis that is to say that analysis which results from the study of the behaviour and activities of individual decision units was for a long time the main concern of the neo classicists quite recently the introduction of macroeconomic theory dealing with aggregate quantities seemed to relegate it to second place but this is not where it belongs we tend to agree with mr raymond barre that there are two different scales of analysis that complement rather than contrast with one another
