science and faith can and do support each other science and christianity are often presented as opposites when in fact the order of the universe and the complexity of life powerfully testify to intelligent design with this comprehensive resource that includes the latest research you ll witness how the findings of scientists provide compelling reasons to acknowledge the mind and presence of a creator featuring more than 45 entries by top caliber experts you ll better understand how scientific concepts like intelligent design are supported by evidencethe scientific findings that support the history and accounts found in the biblethe biases that lead to scientific information being presented as a challenge rather than a complement to christianity whether you re looking for answers to your own questions or seeking to explain the case for intelligent design to others the comprehensive guide to science and faith is an invaluable apologetic tool that will help you explore and analyze the relevant facts research and theories in light of biblical truth

in some recent papers g t hooft and others it has been argued that quantum mechanics can arise from classical cellular automata nonetheless g shpenkov has proved that the classical wave equation makes it possible to derive a periodic table of elements which is very close to mendeleyev s one and describe also other phenomena related to the structure of molecules hence the classical wave equation complements schrödinger s equation which implies the appearance of a cellular automaton molecular model starting from classical wave equation the other studies show that the microworld is constituted as a tessellation of primary topological balls the tessellattice becomes the origin of a submicroscopic mechanics in which a quantum system is subdivided to two subsystems the particle and its inerton cloud which appears due to the interaction of the moving particle with oncoming cells of the tessellattice the particle and its inerton cloud periodically change the momentum and hence move like a wave the new approach allows us to correlate the klein gordon equation with the

deformation coat that is formed in the tessellattice around the particle the submicroscopic approach shows that the source of any type of wave movements including the klein gordon schrödinger and classical wave equations is hidden in the tessellattice and its basic exciations inertons carriers of mass and inert properies of matter we also discuss possible correspondence with konrad zuse s calculating space

this book evaluates and suggests potentially critical improvements to causal set theory one of the best motivated approaches to the outstanding problems of fundamental physics spacetime structure is of central importance to physics beyond general relativity and the standard model the causal metric hypothesis treats causal relations as the basis of this structure the book develops the consequences of this hypothesis under the assumption of a fundamental scale with smooth spacetime geometry viewed as emergent this approach resembles causal set theory but differs in important ways for example the relative viewpoint emphasizing relations between pairs of events and relationships between pairs of histories is central the book culminates in a dynamical law for quantum spacetime derived via generalized path summation

women in stem breaking down the barriers provides a comprehensive examination of the persistent underrepresentation of women across science technology engineering and mathematics drawing from extensive research spanning preschool education through university and employment sectors this book uniquely integrates perspectives from all three key developmental stages to offer a complete analysis of the barriers women face it critically evaluates existing interventions and approaches revealing which strategies have proven effective and which have fallen short women in stem breaking down the barriers delivers practical actionable recommendations for stakeholders across the stem ecosystem and will be of use to professional bodies universities and government policy makers as well as students in gender studies sociology and education
