this little book is the outgrowth of a one semester course which i have taught for each of the past four years at m 1 t although this class used to be one of the standard courses taken by essentially every first year graduate student of mathematics in recent years at least in those when i was the instructor the clientele has shifted from first year graduate students of mathematics to more advanced graduate students in other disciplines in fact the majority of my students have been from departments of engineering especially electrical engineering and most of the rest have been economists whether this state of affairs is a reflection on my teaching the increased importance of mathematical analysis in other disciplines the superior undergraduate preparation of students coming to m 1 t in mathematics or simply the lack of

enthusiasm that these students have for analysis i have preferred not to examine too closely on the other hand the situation did force me to do a certain amount of thinking about what constitutes an appropriate course for a group of non mathematicians who are courageous foolish enough to sign up for an introduction to in tegration theory offered by the department of mathematics in particular i had to figure out what to do about that vast body of material which in standard mathematics offerings is assumed to have been covered in your advanced calculus course

presents the major features of each personality theory offers criteria to guide students evaluation of the theories and provides activities aimed at stimulating critical thinking a revised instructor s resource manual is available on disk ancillary package available upon adoption
