for sophomore junior level courses in automatic control systems
process controls and instrumentation and measurement this text is
designed to provide students with an understanding and appreciation of
some of the essential concepts behind control system elements and
operations without the need of advanced math and theory it also
presents some of the practical details of how elements of a control
system are designed and operated such as would be gained from on the
job experience this edition includes treatment of modern fieldbus
approaches to networked and distributed control systems this middle
ground of knowledge enables students to design the elements of a
control system from a practical working perspective and comprehend how
these elements affect overall system operation and tuning the full
