the new 4th edition of seborg's process dynamics control provides full topical coverage for process control courses in the chemical engineering curriculum emphasizing how process control and its related fields of process modeling and optimization are essential to the development of high value products a principal objective of this new edition is to describe modern techniques for control processes with an emphasis on complex systems necessary to the development design and operation of modern processing plants control process instructors can cover the basic material while also

having the flexibility to include advanced topics

a wide range of identification and control methods applicable to processes are accompanied by typical comparable examples encouraging you to make comparisons the initial classical approach to continuous control by transfer functions will be of enormous benefit whether you are a student beginning in control or an engineer in industry who up until now has only had a land contact with control the more advanced material on discrete control and the state space control as well as nonlinear control and observers requires minimal previous knowledge enabling you to make better use of performing techniques progressively it introduces concepts of increasing difficulty allowing a less brutal tuition of theories and control methods for each topic the theories techniques and algorithms are presented in detail with numerous references the consideration of the same problems by different approaches will provoke a deep understanding it includes all necessary explanations for your complete understanding of the subject and examples that you can reproduce to master the different techniques broad coverage creates an important synthesis on the majority of aspects of control giving you a complete view of control theory and possible applications within the field different levels of reading are possible opening this powerful source of information to students engineers academics and researchers alike
