in today's extremely competitive manufacturing market effective production planning and scheduling processes are critical to streamlining production and increasing profits success in these areas means increased efficiency capacity utilization and reduced time required to complete jobs from the initial stages of plant location and capacity dete

reactive scheduling is concerned with monitoring and controlling the execution of predictive schedules and making any changes required to bring them in line with unanticipated events or disturbances happening in real time whilst predictive scheduling has been a focus of research for many years it is only

recently that explicit attention has been given to the specific problems of reactive scheduling and the relationship between the two this publication explores the scope and status of both existing and potential approaches to reactive scheduling concentration is centred on knowledge based approaches as the importance of domain knowledge whether stored in computers or in the brains of experienced schedulers is becoming increasingly apparent contributions examine a variety of approaches ranging from reactive scheduling decision support frameworks in which the knowledge comes mainly from the human through to completely new approaches to automated reactive scheduling such as neural networks the book will be of particular interest to researchers students and engineers involved in the manufacturing and software development industries in addition to providing a significant reference volume it also aims to stimulate increased discussion in this emerging field

central themes are master planning material requirements planning inventory management capacity management production activity control and just in time each has been updated for this edition previous eds 1984 and 1988 to reflect new ideas and practices as the manufacturing world moves toward the zero everything zero inventory lead time defects waste vision of the future annotation copyrighted by book news inc portland or
