seminar paper from the year 2022 in the subject business economics investment and finance grade 1 5 university of western sydney course financial management of projects language english abstract early cost estimating has often become a major challenge in large projects budget overruns occur time and again which

leads regularly to conflicts between investors project teams contractors and other stakeholders the cause for these are several factors such as inadequate consideration of project risks insufficient project information and an unclear project scope or unforeseen project complexities the following literature review therefore observes the risk identification of major construction and infrastructure projects as one of the major reasons for cost overruns this review aims to deliver an overview of the different approaches to the identification of risks during the early stage of large projects in this context however no rigid definition of the term major project has yet emerged there is no fixed rule when a project is a major project and should be organized likewise a major project is characterized by the fact that it differs from the client's usual projects in terms of its planning and implementation duration its complexity the large number of participants or its high social significance in contrast to small and medium sized construction projects where routine can be applied extensive infrastructure and construction projects are often a multitude of different tasks with several interconnections and interfaces they often require more complicated organizational structures and accordingly many risk management requirements whether a project is considered a major project depends on the specific individual case in these projects decision makers often rely on intuition judgment and their personal experiences to conduct risk assessments and cost estimates although various risk assessment models have been developed in recent years the lack of precise and general data to examine risk effects usually leads to inconsistencies and inaccuracies in risk assessment this often results in significant budget overruns for large construction and infrastructure projects

this book for the first time proposes the complex systems management theory based on the integration of complex systems theory and management science to solve the overall complexity problem that cannot be dealt with by the reductionism approach this theory not only provides a new way of thinking but also introduces a novel logic for cognition which has significant academic novelty and practical implications in particular by illustrating many real cases it explains how to apply the complex systems management theory and contribute to practice this book aims to build complex system management as a new integrated and fundamental concept in the field of management science that has significant potential which has clear and important academic connotations it develops a big data driven modeling technique for complex system scenarios based on the latest information technology to improve the ability of complex systems management theory in coping with the complexity of real problems this book provides a new paradigm of thinking a body of knowledge and management tools for scholars and practitioners to analyze and solve problems with complex integrity

through the introduction of a new lens through which to view infrastructure finance policy this book analyses the role of public private partnerships within the context of long term capital investment and improvement planning and as a critical aspect of effective long term capital infrastructure finance policy
