faced with an ever growing resource scarcity and environmental regulations the last 30 years have witnessed the rapid development of various renewable power sources such as wind tidal and solar power generation the variable and uncertain nature of these resources is well known while the utilization of power electronic converters presents new challenges for the stability of the power grid consequently various control and operational strategies have been proposed and implemented by the industry and research community with a growing requirement for flexibility and load regulation placed on conventional thermal power generation against this background the modelling and control of conventional thermal engines such as those based on diesel and gasoline are experiencing serious obstacles when facing increasing environmental concerns efficient control that can fulfill the requirements of high efficiency low pollution and long durability is an emerging requirement the modelling simulation and control of thermal energy systems are key to providing innovative and effective solutions through applying detailed dynamic modelling a thorough understanding of the thermal conversion mechanism s can be achieved based on which advanced control strategies can be designed to improve the performance of the thermal energy system both in economic and environmental terms simulation studies and test beds are also of great significance for these research activities prior to proceeding to field tests this special issue will contribute a practical and comprehensive forum for exchanging novel research ideas or empirical practices that bridge the modelling simulation and control of thermal energy systems papers that analyze particular aspects of thermal energy systems involving for example conventional power plants innovative thermal power generation various thermal engines thermal energy storage and fundamental heat transfer management on the basis of

one or more of the following topics are invited in this special issue power plant modelling simulation and control thermal engines thermal energy control in building energy systems combined heat and power chp generation thermal energy storage systems improving thermal comfort technologies optimization of complex thermal systems modelling and control of thermal networks thermal management of fuel cell systems thermal control of solar utilization heat pump control heat exchanger control

this book discusses clean coal technology cct the latest generation of coal technology that controls pollutants and performs with improved generating efficiency cct involves processes that effectively control emissions and result in highly efficient combustion without significantly contributing to global warming basic principles operational a

despite efforts to increase renewables the global energy mix is still likely to be dominated by fossil fuels in the foreseeable future particularly gas for electricity and oil for land air and sea transport the reliance on depleting conventional oil and natural gas resources and the geographic distribution of these reserves can have geopolitical implications for energy importers and exporters global energy policy and security examines the security of global and national energy supplies as well as the sensitivity and impacts of sustainable energy policies which emphasize the various political economic technological financial and social factors that influence energy supply demand and security multidisciplinary perspectives provide the interrelated topics of energy security and energy policy within a rapidly changing socio political and technological landscape during the 21st century included are two main types of interdisciplinary papers one set of papers deals with technical aspects of energy efficiency renewable energy and the use of tariffs the other set of papers focuses on social economic or political issues related to energy security and policy also describing

research practical projects and other concrete initiatives being performed in different parts of the world this book will prove useful to all those students and researchers interested in the connections between energy production energy use energy security and the role of energy policies

this collection highlights materials research and innovations for a wide breadth of energy systems and technologies the volume includes papers organized into the following sections energy and environmental issues in materials manufacturing and processing materials in clean power materials for coal based power materials for energy conversion with emphasis on softc materials for gas turbines materials for nuclear energymaterials for oil and gas

proceedings of the fisita 2012 world automotive congress are selected from nearly 2 000 papers submitted to the 34th fisita world automotive congress which is held by society of automotive engineers of china sae china and the international federation of automotive engineering societies fisita this proceedings focus on solutions for sustainable mobility in all areas of passenger car truck and bus transportation volume 3 future automotive powertrains i focuses on alternative fuel and new engine advanced hybrid electric vehicle plug in electric vehicle above all researchers professional engineers and graduates in fields of automotive engineering mechanical engineering and electronic engineering will benefit from this book sae china is a national academic organization composed of enterprises and professionals who focus on research design and education in the fields of automotive and related industries fisita is the umbrella organization for the national automotive societies in 37 countries around the world it was founded in paris in 1948 with the purpose of bringing engineers from around the world together in a spirit of cooperation to share ideas and advance the technological development of the automobile

green power perspectives on sustainable electricity generation provides a systematic overview of the current state of green power and renewable electrical energy production in the world presenting eight in depth case studies of green power production and dissemination it illustrates the experiences and best practices of various countries on this topic of critical importance the book s case studies provide readers with policy business and societal perspectives they examine the differences in each country s natural endowments cultural make up technological development public policy concerns and institutional incentive structures relative to the advancement of green and sustainable energy considers china s energy profile and what is being done to reduce the country s reliance on coal describes the cultural foundations and institutional environment that gave birth to germany s energy revolution supplies an overview of the renewable energy sector in spain and analyzes its future prospects in light of recent economic difficulties reports on french polynesia s progress in its quest to generate half of its electricity from renewable sources by 2020 investigates the feasibility of biomass as a large scale electricity generation option explores the vision of power generation in space that could solve mankind s energy needs permanently by illustrating the experiences of other nations the book outlines valuable lessons learned and best practices that can be extremely helpful to other countries as they seek a greener energy profile supplying a timely overview of renewable and non renewable electric power sources it provides in depth analysis of the key factors that affect success it also identifies practices that have been precursors to failure so you can avoid making the same mistakes in your quest to contribute to the long overdue advancement of green energy
