a description of 148 algorithms fundamental to number theoretic computations in particular for computations related to

algebraic number theory elliptic curves primality testing and factoring the first seven chapters guide readers to the heart of current research in computational algebraic number theory including recent algorithms for computing class groups and units as well as elliptic curve computations while the last three chapters survey factoring and primality testing methods including a detailed description of the number field sieve algorithm the whole is rounded off with a description of available computer packages and some useful tables backed by numerous exercises written by an authority in the field and one with great practical and teaching experience this is certain to become the standard and indispensable reference on the subject
