interorganizational collaboration, complexity, ethics, and communication centers around three key assertions: 1) interorganizational collaboration is complex and warrants study as a specific type of leadership and communication; 2) successful collaborative relationships are grounded in a principled ethic of democratic and egalitarian participation; and 3) interorganizational collaboration requires a specific communication language of practice. Interorganizational collaboration is influenced by increased interconnectedness, shifting organizational needs, and a changing workforce. Collaboration invokes ethical questions and ethical responsibilities that must be considered in communication practices and structures, although there are

many popular books and practitioner materials on collaboration most are not focused on introducing foundational concepts to a novice audience in addition the subject of communication in collaboration has been somewhat underdeveloped the authors focus on communication from a social constructionist stance one of their primary goals is to develop a collaboration pedagogy based on existing communication scholarship the authors present communicative practices vital to interorganizational participation and they view collaboration as something beyond an exchange of resources and knowledge unlike group and organizational texts that approach collaboration from a functional or strategic perspective this text anchors collaboration in the assumption that democratic and principled communication will foster creative and accountable outcomes for participants in collaborative problem solving the authors articulate a collaborative ethic useful in all communicative contexts micropractices of communication are fundamental not only to collaborating across organizations but also to fostering just and trusting relationships the book discusses the cornerstone assumptions and principled practices necessary for stakeholders to address problems for example recognizing and validating the needs of fellow stakeholders separating people's positions from underlying interests listening for things that are never quite said identifying overlapping commonalities building trust while respecting difference and constructively navigating conflict the book also focuses on building collaborative praxis based on the assumption of contingency praxis cultivates knowledge and ethical understanding of a situation so participants in collaborations can make the best decision based on specific circumstances
