this volume shows how spreadsheets are used in real life to model and analyse real business problems by modelling problems using spreadsheets from the outset the text prepares future managers for the types of problems they will encounter in their daily workload

practical spreadsheet modeling using risk provides a guide of how to construct applied decision analysis models in spreadsheets the focus is on the use of monte carlo simulation to provide quantitative assessment of uncertainties and key risk drivers the book presents numerous examples based on real data and relevant practical decisions in a variety of settings including

health care transportation finance natural resources technology manufacturing retail and sports and entertainment all examples involve decision problems where uncertainties make simulation modeling useful to obtain decision insights and explore alternative choices good spreadsheet modeling practices are highlighted the book is suitable for graduate students or advanced undergraduates in business public policy health care administration or any field amenable to simulation modeling of decision problems the book is also useful for applied practitioners seeking to build or enhance their spreadsheet modeling skills features step by step examples of spreadsheet modeling and risk analysis in a variety of fields description of probabilistic methods their theoretical foundations and their practical application in a spreadsheet environment extensive example models and exercises based on real data and relevant decision problems comprehensive use of the risk software for simulation analysis including a free one year educational software license

reflects the latest applied research and features state of the art software for building and solving spreadsheet optimization models thoroughly updated to reflect the latest topical and technical advances in the field optimization modeling with spreadsheets second edition continues to focus on solving real world optimization problems through the creation of mathematical models and the use of spreadsheets to represent and analyze those models developed and extensively classroom tested by the author the book features a systematic approach that equips readers with the skills to apply optimization tools effectively without the need to rely on specialized algorithms this new edition uses the powerful software package risk solver platform rsp for optimization including its evolutionary solver which employs many recently developed ideas for heuristic programming the author provides expanded coverage of integer programming and discusses linear and nonlinear programming using a systematic approach that emphasizes the use of spreadsheet based optimization tools the second edition also features classifications for the various problem types providing the reader with a broad framework for building and recognizing optimization models network models that allow for a more general form of mass balance a systematic introduction to data envelopment analysis dea the identification of qualitative patterns in order to meaningfully interpret linear programming solutions an introduction to stochastic programming and the use of rsp to solve problems of this type additional examples exercises and cases have been included throughout allowing readers to test their comprehension of the material in addition a related website features microsoft office excel files to accompany the figures and data sets in the book with its accessible and comprehensive presentation optimization modeling with spreadsheets second edition is an excellent book for courses on deterministic models optimization and spreadsheet modeling at the upper undergraduate and graduate levels the book can also serve as a reference for researchers practitioners and consultants working in business engineering operations research and management science

managers are often under great pressure to improve the performance of their organizations to improve performance one needs to constantly evaluate operations or processes related to producing products providing services and marketing and selling products performance evaluation and benchmarking are a widely used method to identify and adopt best practices as a means to improve performance and increase productivity and are particularly valuable when no objective or engineered standard is available to define efficient and effective performance for this reason benchmarking is often used in managing service operations because service standards benchmarks are more difficult to define than manufacturing standards benchmarks can be established but they are somewhat limited as they work with single measurements one at a time it is difficult to evaluate an organization s performance when there are multiple inputs and outputs to the system the difficulties are further enhanced when the relationships between the inputs and the outputs are complex and involve unknown tradeoffs it is critical to show benchmarks where multiple measurements exist the current book introduces the methodology of data envelopment analysis dea and its uses in performance evaluation and benchmarking under the context of multiple performance measures
