in the 3rd edition of the leading introductory textbook to planning theory allmendinger provides a wide ranging and up to date analysis of planning theories how these relate to planning practice and their significance moving away from a linear chronological model of progress over time from one paradigm to another allmendinger explains how and why different theories have gained dominance in particular places at particular times giving the reader a holistic view of the field of scholarship and to demonstrate the relevance of planning theory for practise planning theory has undergone significant changes in recent decades as new theories and perspectives have emerged allmendinger takes care to detail the historical evolution of planning theory and the key philosophical issues involved so as enable the reader to both understand and critique theories as they encounter them this much revised edition of philip allmendinger s text draws upon both established theories and expands its scope of current thinking around neoliberalism post colonialism and post structuralist thinking on politics space and scale this unique approach to planning theory means this is an essential for all students completing planning theory courses in urban or planning studies at both undergraduate and postgraduate level new to this edition comprehensively revised and updated throughout greater international scope of coverage of theories and practice examples reflects the shift in planning theory to post structuralism

this book includes twelve newly commissioned and carefully curated chapters each of which presents an alternative planning history and theory written from the perspective of groups that have been historically marginalized or neglected in teaching planning history

and theory many planning programs tend to follow the planning cannon a normative perspective that mostly accounts for the experience of white anglo christian middle class middle aged heterosexual able bodied men this book takes a unique approach it provides alternative planning history and theory timelines for each of the following groups women the poor lgbtq communities people with disabilities older adults children religious minorities people of color migrants indigenous people and colonized peoples in south asia and sub saharan anglophone africa to allow for easy cross comparison chapters follow a similar chronological structure which extends from the late 19th century into the present the authors provide insights into the core planning issues in each time period and review the different stances and critiques the book is a must read for planning students and instructors each chapter includes the following pedagogical features 1 a boxed case study which presents a recent example of positive change to showcase theory in practice 2 a table which lays out an alternative planning history and theory timeline for the group covered in the chapter and 3 suggestions for further study comprising non academic sources such as books websites and films

the purpose of the book is to elaborate a planning theory which departs from the plethora of theories which reflect the conditions of developed countries of the north west the empirical material of this effort is derived from a country greece which sits on the edge between north west and south east at the corner of europe no doubt there is extensive international literature on planning theory in general from a bewildering variety of viewpoints the interested professional or student of urban and regional planning is certainly aware of the dizzying flood of books articles and research reports on planning theory and of their never ending borrowing of obscure concepts from more respectable scientific disciplines from mathematics to philosophy and from physics to economics human geography and sociology he or she probably observed that there is a growing interest in theoretical approaches from the viewpoint of the so called global south the

author of the present book has for many decades faced the impasse of attempting to transplant theories founded on the experience of the north west to countries with a totally different historical political social and geographical background he learned that the reality that planners face is unpredictable patchy and responsive to social processes frequently of a very pedestrian nature planning strives to deal with private interests which planners are keen to envelop in a single public interest which is extremely hard to define the behaviour of the average citizen far from being that of the neoclassical model of the homo economicus is that of an individual a kind of homo individualis who interacts with the state and the public administration within a complex web of mutual dependence and negotiation the state and its administrative apparatus i e the key determinants and fixers of urban and regional planning policy bargain with this individual offer inducements exemptions derogations and privileges deviate unhesitatingly from their grand policy pronouncements but still defend the rationality and comprehensiveness of the planning system they have legislated and operationalized it is by and large a successful modus vivendi but only thanks to a constant practice of compromise hence the term compromise planning which the author coined as an alternative to all the existing theoretical forms of planning this is the sort of planning and of the accompanying theory with which he deals in this book it is the outcome of experience and knowledge accumulated in a long personal journey of academic teaching in england and greece research and professional involvement

a deep exploration on how questions of time and its organisation affect planning practice this book is aimed at public and private planning practitioners national and local politicians and policy makers involved in planning academics and students studying planning and related disciplines it presents time as a pervasive form of power that is used to shape democratic practices and questions project speed where time to think deliberate and plan has been squeezed the authors demonstrate the many benefits of

slow planning for the key participants multiple interests and planning system overall

the sixth edition of the highly successful the city reader juxtaposes the very best classic and contemporary writings on the city to provide the comprehensive mapping of the terrain of urban studies and planning old and new the city reader is the anchor volume in the routledge urban reader series and is now integrated with all ten other titles in the series this edition has been extensively updated and expanded to reflect the latest thinking in each of the disciplinary areas included and in topical areas such as compact cities urban history place making sustainable urban development globalization cities and climate change the world city network the impact of technology on cities resilient cities cities in africa and the middle east and urban theory the new edition places greater emphasis on cities in the developing world globalization and the global city system of the future the plate sections have been revised and updated sixty generous selections are included forty four from the fifth edition and sixteen new selections including three newly written exclusively for the city reader the sixth edition keeps classic writings by authors such as ebenezer howard ernest w burgess lecorbusier lewis mumford jane jacobs and louis wirth as well as the best contemporary writings of among others peter hall manuel castells david harvey saskia sassen and kenneth jackson in addition to newly commissioned selections by yasser elshestawy peter taylor and lawrence vale new selections in the sixth edition include writings by aristotle peter calthorpe alberto camarillo filip deboech edward glaeser david owen henri pirene the project for public spaces jonas rabinovich and joseph lietman doug saunders and bish sanyal the anthology features general and section introductions as well as individual introductions to the selected articles introducing the authors providing context relating the selection to other selection and providing a bibliography for further study the sixth edition includes fifty plates in four plate sections substantially revised from the fifth edition

complexity complex systems and complexity theories are becoming increasingly

important within a variety of disciplines while these issues are less well known within the discipline of spatial planning there has been a recent growing awareness and interest as planners grapple with how to consider the vagaries of the real world when putting together proposals for future development they question how complexity, complex systems and complexity theories might prove useful with regard to spatial planning and the physical environment this book provides a readable overview presenting and relating a range of understandings and characteristics of complexity and complex systems as they are relevant to planning it recognizes multiple relational approaches of dynamic complexity which enhance understandings of and facilitate working with contingencies of place, time and the various participants' behaviours in doing so it should contribute to a better understanding of processes with regard to our physical and social worlds

today our cities are an embodiment of the complex historical evolution of knowledge, desires and technology our planned and designed activities co-evolve with our aspirations mediated by the existing technologies and social structures the city represents the accretion and accumulation of successive layers of collective activity structuring and being structured by other increasingly distant cities reaching now right around the globe this historical and structural development cannot therefore be understood or captured by any set of fixed quantitative relations structural changes imply that the patterns of growth and their underlying reasons change over time and therefore that any attempt to control the morphology of cities and their patterns of flow by means of planning and design must be dynamical based on the mechanisms that drive the changes occurring at a given moment this carefully edited post-proceedings volume gathers a snapshot view by leading researchers in the field of current complexity theories of cities in it the achievements, criticisms and potentials yet to be realized are reviewed and the implications to planning and urban design are assessed
