during the course of world war ii many cities in britain and japan were badly damaged by enemy bombers the destruction caused terrible suffering but also triggered hopes for a better future haphazard urban development in the past had bequeathed an unhappy legacy cities were disfigured by poor transport systems overcrowding lack of amenity and ugliness yet there was no need to repeat such mistakes a new emphasis on rationality and aesthetics could produce very different results the cities of the future might be places of airiness and light of efficiency and joy of work but also satisfying leisure the key requirement was that reconstruction needed to be planned because it was only the planners who had the imagination and skills to see how change should be engineered

since the 1950s and the advance of urban renewal local governments and urban policy have focused heavily on the central business district however such development has all but ignored the inner city neighborhoods that continue to struggle in the shadows of high rise america this analysis of urban neighborhoods in the united states from 1960 to 1995 presents fifteen essays

with critical issues like desegregation and funding facing our schools dissatisfaction with public education has reached a new high teachers decry inadequate resources while critics

claim educators are more concerned with job security than effective teaching though urban education has reached crisis proportions contending players have difficulty agreeing on a common program of action this book tells why changing urban education confronts the prevailing naivete in school reform by examining the factors that shape reinforce or undermine reform efforts edited by one of the nation s leading urban scholars it examines forces for change and resistance in urban education and proposes that the barrier to reform can only be overcome by understanding how schools fit into the broader political contexts of their cities much of the problem with our schools lies with the reluctance of educators to recognize the profoundly political character of public education the contributors show how urban political contexts vary widely with factors like racial composition the role of the teachers union and relations between cities and surrounding metropolitan areas presenting case studies of original field research in baltimore chicago houston and six other urban areas they consider how resistance to desegregation and the concentration of the poor in central urban areas affect education and they suggest how cities can build support for reform through the involvement of business and other community players by demonstrating the complex interrelationship between urban education and politics this book shows schools to be not just places for educating children but also major employers and large spenders of tax dollars it also introduces the concept of civic capacity the ability of educators and non educators to work together on common goals and suggests that this key issue must be addressed before education can be improved changing urban education makes it clear to educators that the outcome of reform efforts depends heavily on their political context as it reminds political scientists that education is a major part of the urban mix while its prognosis is not entirely optimistic it sets forth important guidelines that cannot be ignored if our schools are to successfully prepare children for the future
