rematerial brings to light a movement of diverse professionals from around the world who address this fundamental theme the reuse of materials with architectonic purpose though the results are as varied as the designers all their proposals stem from the intention of giving new life to what had been thrown out

reduce reuse recycle and recover is the sustainable guideline that has replaced the take make waste attitude of the industrial age based on their background at the eth zurich and the future cities laboratory in singapore the authors provide both a conceptual and practical look into materials and products which use waste as a renewable resource this book introduces an inventory of current projects and building elements ranging from marketed products among them façade panels made of straw and self healing concrete to advanced research and development like newspaper wood or jeans denim used as isolating fibres going beyond the mere recycling aspect of reused materials it looks into innovative concepts of how materials usually regarded as waste can be processed into new construction elements the products are organized along the manufacturing processes densified reconfigured transformed designed and cultivated materials a product directory presents all materials and projects in this book according to their functional uses in construction load bearing self supporting insulating waterproofing and finishing products

architecture and design currently play a minor role in the design and construction of industrial building types especially waste to energy facilities through comparing the well established waste to energy industries in sweden with less established engagements in the northeast of the united states opportunities and lessons are revealed this book presents a refreshed design led approach to waste to energy wte plants reflecting work done at harvard university graduate school of design gsd architecture and design currently play a minor role in the design and construction of industrial building types especially waste to energy facilities architects have a role to play in integrating waste to energy plants physically and programmatically within their urban or suburban contexts as well as potentially lessening the generally negative perception of energy recovery plants

global material crises are imminent in the very near future recycling will no longer be a choice made by those concerned about the environment but a necessity for all this means a paradigm shift in domestic behavior manufacturing construction and design is inevitable the architecture of waste provides a hopeful outlook through examining current recycling practices rethinking initial manufacturing techniques and proposing design solutions for second lives of material objects the book touches on a variety of inescapable issues beyond our global waste crisis including cultural psyches politics economics manufacturing marketing and material science a series of crucial perspectives from experts cover these topics and frames the research by providing a past present and future look at how we got here and where we go next the historical the material and the design twelve design proposals look beyond the simple application of recycled and waste materials in architecture an admirable endeavor but one that does not engage the urgent reality of a circular economy by aiming to transform familiar yet flawed material objects into closed loop resources complete with over 150 color images and written for both professionals and students the architecture of waste is a necessary reference for rethinking the traditional role of the architect and challenging the discipline to address urgent material issues within the larger design process

projecting forward in time from the processes of design and construction that are so often the focus of architectural discourse consuming architecture examines the variety of ways in which buildings are consumed after they have been produced focusing in particular on processes of occupation appropriation and interpretation drawing on contributions by architects historians anthropologists literary critics artists film makers photographers and journalists it shows how the consumption of architecture is a dynamic and creative act that involves the creation and negotiation of meanings and values by different stakeholders and that can be expressed in different voices in so doing it challenges ideas of what constitutes architecture architectural discourse and architectural education how we understand and think about it and who can claim ownership of it consuming architecture is aimed at students in architectural education and will also be of interest to students and researchers from disciplines that deal with architecture in terms of consumption and material culture

designing buildings and physical environments depends on social structure social needs economic data environment and technological development planning these environments is heavily influenced by cultural and regional need the existing environment and the materials available reusable and sustainable building materials in modern architecture is an essential reference source that discusses the shaping of building design through culture and materials as well as the influence of environment on building design featuring research on topics such as passive design ecological design and urban design this book is ideal for academicians specialists and researchers seeking coverage on culture environment and building design

project report from the year 2015 in the subject art architecture history of construction grade 12 danish equals to a university college of northern denmark technology course architectural technology language english abstract this research project is concerned with the question what influence and possibilities recycled materials have in building construction and architectural appearance material in this case by definition is substance that things are made of recycled materials automatically is represented as substances of things that are re used for other or new purposes the whole world is compiled out of billions of different materials some of them are considered to be renewable and some of them unfortunately are unendurable which leads to the coherent idea that sooner or later the earth will lose the natural capability to meet human society needs in terms of amount of existing materials most of materials used in building industry are either organic or human made goods which for the records the majority of time are made out at least partly out of organic natural substances for instance concrete brick glass it has already been about 8 thousands years how people are building houses which requires a certain amount of materials with an increasing number of population the quantity of building supplies gradually raises which leads to the concern of dwindling natural sources for that reason increasing information amount is becoming essential explaining the possible ways of saving the sources as well as why is it important what outcomes may or may not possible come if we do or do not take certain actions since building industry is one of the dominating existing industries it

undoubtedly pursue to the idea that recycled materials usage into building industry for both construction and design might be one of the key actions to be taken in order to achieve sufficient results within the time and to aim more sustainable self conscious so

designing for zero waste is a timely topical and necessary publication materials and resources are being depleted at an accelerating speed and rising consumption trends across the globe have placed material efficiency waste reduction and recycling at the centre of many government policy agendas giving them an unprecedented urgency while there has been a considerable literature addressing consumption and waste reduction from different disciplinary perspectives the complex nature of the problem requires an increasing degree of interdisciplinarity resource recovery and the optimisation of material flow can only be achieved alongside and through behaviour change to reduce the creation of material waste and wasteful consumption this book aims to develop a more robust understanding of the links between lifestyle consumption technologies and urban development
