the handbook philosophy of technology and engineering sciences addresses numerous issues in the emerging field of the philosophy of those sciences that are involved in the technological process of designing developing and making of new technical artifacts and systems these issues include the nature of design of technological knowledge and of technical artifacts as well as the toolbox of engineers most of these have thus far not been analyzed in general philosophy of science which has traditionally but inadequately regarded technology as mere applied science and focused on physics biology mathematics and the social sciences first comprehensive philosophical handbook on technology and the engineering sciences unparalleled in scope including explorative articles in depth discussion of technical artifacts and their ontology provides extensive analysis of the nature of engineering design focuses in detail on the role of models in technology

from utilitarian arrowheads to beautiful stone effigy pipes to ornately carved shell disks the photographs and drawings in sun circles and human hands present the archaeological record of the art and native crafts of the prehistoric southeastern indians painstakingly compiled in the 1950s by two sisters who traveled the eastern united states interviewing archaeologists and collectors and visiting the major repositories although research over the last 50 years has disproven many of the early theories reported in the text which were not the editors theories but those of the archaeologists of the day the excellent illustrations of objects no longer available for examination have more than validated the lasting worth of this popular book

this book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design however although what i am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as i discovered when i attempted to find supporting evidence in fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways i am advocating there is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations after years of neglect the study of history and the use of historical precedent are again becoming important however that interest has not led to new approaches to the subject nor have its bases been examined this i try to do in so doing i discuss a more rigorous and i would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design underlying this is my view of environment behavior studies cebs as an emerging theory rather than as data to help design based on current theory although this will be the subject of another book a summary statement of this position may be useful
