this book constitutes the refereed proceedings of the 16th international conference on automated reasoning with analytic tableaux and related methods tableaux 2007 held in aix en provence france it covers the wide range of logics from intuitionistic and substructural logics to modal logics including temporal and dynamic logics from many valued logics to nonmonotonic logics and from classical first order logic to description logics

in an information society heavily dependent on communications and distributed systems feature interactions are likely to become an even more important problem than they are today a particularly interesting issue given the current work on agents is whether feature interactions will be more likely in systems with many autonomous agents performing tasks the current

demand for better and more convenient communications requires development of a variety of new services as quickly as possible as the number of services becomes larger however feature interactions create incompatibilities between the various functions needed to implement them in developing telecommunication systems we now spend huge numbers of person hours on software modifications and testing whenever a new function is added much of this time is spent on detecting and eliminating problems arising from feature interaction in the future as ever more services are offered feature interactions will become a major bottleneck in the development of software for telecommunications systems this book presents opinions on the technical problems involved in feature interactions and definitions of features and feature interactions

this edited volume focuses on the work of professor larisa maksimova providing a comprehensive account of her outstanding contributions to different branches of non classical logic the book covers themes ranging from rigorous implication relevance and algebraic logic to interpolation definability and recognizability in superintuitionistic and modal logics it features both her scientific autobiography and original contributions from experts in the field of non

classical logics professor larisa maksimova s influential work involved combining methods of algebraic and relational semantics readers will be able to trace both influences on her work and the ways in which her work has influenced other logicians in the historical part of this book it is possible to trace important milestones in maksimova s career early on she developed an algebraic semantics for relevance logics and relational semantics for the logic of entailment later maksimova discovered that among the continuum of superintuitionisitc logics there are exactly three pretabular logics she went on to obtain results on the decidability of tabularity and local tabularity problems for superintuitionistic logics and for extensions of s4 further investigations by maksimova were aimed at the study of fundamental properties of logical systems different versions of interpolation and definability disjunction property etc in big classes of logics and on decidability and recognizability of such properties to this end she determined a powerful combination of algebraic and semantic methods which essentially determine the modern state of investigations in the area as can be seen in the later chapters of this book authored by leading experts in non classical logics these original contributions bring the reader up to date on the very latest work in this field

this work is significant it is the first to include a method of assessing structural strength in the context of the modern marine environment commander m c cruder u s coast guard acclaimed author and naval architect dave gerr created this unique system of easy to use scantling rules and rules of thumb for calculating the necessary dimensions or scantlings of hulls decks and other boat parts whether built of fiberglass wood wood epoxy composite steel or aluminum in addition to the rules themselves the elements of boat strength offers their context an in depth plain english discussion of boatbuilding materials methods and practices that will guide you through all aspects of boat construction now you can avoid wading through dense technical engineering manuals or tackling advanced mathematics the elements of boat strength has all the formulas tables illustrations and charts you need to judge how heavy each piece of your boat should be in order to last and be safe with this book an inexpensive scientific calculator
