leon krier is one of the best known and most provocative architects and urban theoreticians in the world until now however his ideas have circulated mostly among a professional audience of architects city planners and academics in the architecture of community krier has reconsidered and expanded writing from his 1998 book architecture choice or fate here he refines and updates his thinking on the making of sustainable humane and attractive villages towns and cities the book includes drawings diagrams and photographs of his built works which have not been widely seen until now

this important addition to the literature is the first overall study of the architecture of norman

england since sir alfred clapham s english romanesque architecture after the conquest 1934  
eric fernie a recognized authority on the subject begins with an overview of the architecture  
of the period paying special attention to the importance of the architectural evidence for an  
understanding of the norman conquest the second part the core of the book is an  
examination of the buildings defined by their function as castles halls and chamber blocks  
cathedrals abbeys and collegiate churches monastic buildings parish churches and palace  
chapels the third part is a reference guide to the elements which make up the buildings such  
as apses passages vaults galleries and decorative features and the fourth offers an account  
of the processes by which they were planned and constructed this book contains powerful  
new ideas that will affect the way in which we look at and analyze these buildings

the author here presents an architectural history of paris stretching from the 3rd century bc  
up until the end of the 20th century

the architecture of ruins designs on the past present and future identifies an alternative and  
significant history of architecture from the sixteenth century to the twenty first century in  
which a building is designed occupied and imagined as a ruin this design practice conceives  
a monument and a ruin as creative interdependent and simultaneous themes within a single  
building dialectic addressing temporal and environmental questions in poetic psychological  
and practical terms and stimulating questions of personal and national identity nature and  
culture weather and climate permanence and impermanence and life and death conceiving a  
building as a dialogue between a monument and a ruin intensifies the already blurred  
relations between the unfinished and the ruined and envisages the past the present and the  
future in a single architecture structured around a collection of biographies this book  
conceives a monument and a ruin as metaphors for a life and means to negotiate between a  
self and a society emphasising the interconnections between designers and the particular  
ways in which later architects learned from earlier ones the chapters investigate an evolving  
interdisciplinary design practice to show the relevance of historical understanding to design  
like a history a design is a reinterpretation of the past that is meaningful to the present  
equally a design is equivalent to a fiction convincing users to suspend disbelief we expect a  
history or a novel to be written in words but they can also be delineated in drawing cast in  
concrete or seeded in soil the architect is a physical novelist as well as a physical historian  
like building sites ruins are full of potential in revealing not only what is lost but also what is  
incomplete a ruin suggests the future as well as the past as a stimulus to the imagination a  
ruin s incomplete and broken forms expand architecture s allegorical and metaphorical  
capacity indicating that a building can remain unfinished literally and in the imagination  
focusing attention on the creativity of users as well as architects emphasising the symbiotic  
relations between nature and culture a building designed occupied and imagined as a ruin  
acknowledges the coproduction of multiple authors whether human non human or  
atmospheric and is an appropriate model for architecture in an era of increasing climate  
change
