this book is the first history of scientific thought about future social events and trends covering the years 1794 to 1982 one of the best ways to prepare to make scientific predictions about the future is to review the predictions made by the most able and or stimulating earlier futurists and their reasons for making them unfortunately these predictions are scattered among hundreds of different books and articles and no history of them has been available as a result most futurists have paid little attention to the brilliant contributions of their predecessors they rarely explain whether their own ideas are original in part or whole this book presents a précis of the thought of past futurists so that future futurists can understand and acknowledge the contributions of their intellectual ancestors

through empirical analysis and theoretical reflection this book shows that the aesthetics and politics of the islamic state is futurist isis overcomes postmodern pessimism and joins the modern techno oriented and optimistic attitude propagated by italian futurism in the early twentieth century the islamic state does not only excel through the extensive use of high tech weapons social media commercial bot and automated text systems by putting forward the presence of speeding cars and tanks mobile phones and computers isis presents jihad life as connected to modern urban culture futurism praised violence as a means of leaving behind imitations of the past in order to project itself most efficiently into the future a profound sense of crisis produces in both futurism and jihadism a nihilistic attitude toward the present state of society that will be overcome through an exaltation of technology futurists were opposed to parliamentary democracy and sympathized with nationalism and colonialism isis jihadism suggests a similarly curious combination of modernism and conservative values the most obvious modern characteristic of this new image of fundamentalism is the highly aestheticized recruiting material
