agile methodologies can be mistaken as an ad hoc approach to working most agile teams limit planning to the immediate future like what are you doing in the next sprint do you do this how agile are cots selection methods team size mainstream agile processes work very well for smaller teams of ten to fifteen people any process often works for such teams and what if the team is much larger do you look at the business as needing a substantial remodel a light remodel or how do you view the physical assets and how do you phase that into such other initiatives greater accountability business people taking responsibility for the decisions they make even if its a decision to refer the matter to legal what are the options defining designing creating and implementing a process to solve a challenge or meet an objective is the most valuable role in every group company organization and department unless you are talking a one time single use project there should be a process whether that process is managed and implemented by humans ai or a combination of the two it needs to be designed by someone with a complex enough perspective to ask the right questions someone capable of asking the right questions and step back and say what are you
