here is an idea that just might save the world it is that science properly understood provides us with the methodological key to the salvation of humanity a version of this idea can be found in the works of karl popper famously popper argued that science cannot verify theories but can only refute them and this is how science makes progress scientists are forced to think up something better and it is this according to popper that drives science forward but nicholas maxwell finds a flaw in this line of argument physicists only ever accept theories that are unified theories that depict the same laws applying to the range of phenomena to which the theory applies even though many other empirically more successful disunified theories are always available this means that science makes a questionable assumption about the universe namely that all disunified theories are false without some such presupposition as this the whole empirical method of science breaks down by proposing

a new conception of scientific methodology which can be applied to all worthwhile human endeavours with problematic aims maxwell argues for a revolution in academic inquiry to help humanity make progress towards a better more civilized and enlightened world
