one of the great achievements of contemporary mathematics is the new understanding of four dimensions michael freedman and frank quinn have been the principals in the geometric and topological development of this subject proving the poincaré and annulus conjectures respectively recognition for this work includes the award of the fields medal of the international congress of mathematicians to freedman in 1986 in topology of 4 manifolds these authors have collaborated to give a complete and accessible account of the current state of knowledge in this field the basic material has been considerably simplified from the original publications and should be accessible to most graduate students the advanced material goes well beyond the literature nearly one third of the book is new this work is indispensable for any topologist whose work includes four dimensions it is a valuable reference for geometers and physicists who need an awareness of the topological side of the field originally published in 1990 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in

the thousands of books published by princeton university press since its founding in 1905

based on fields medal winning work of michael freedman this book explores the disc embedding theorem for 4 dimensional manifolds this theorem underpins virtually all our understanding of topological 4 manifolds most famously this includes the 4 dimensional poincaré conjecture in the topological category the disc embedding theorem contains the first thorough and approachable exposition of freedman s proof of the disc embedding theorem with many new details a self contained account of decomposition space theory a beautiful but outmoded branch of topology that produces non differentiable homeomorphisms between manifolds is provided as well as a stand alone interlude that explains the disc embedding theorem s key role in all known homeomorphism classifications of 4 manifolds via surgery theory and the s cobordism theorem additionally the ramifications of the disc embedding theorem within the study of topological 4 manifolds for example frank quinn s development of fundamental tools like transversality are broadly described the book is written for mathematicians within the subfield of topology specifically interested in the study of 4 dimensional spaces and includes numerous professionally rendered figures
