wind turbine aerodynamics is one of the central subjects of wind turbine technology to reduce the levelized cost of energy lcoe the size of a single wind turbine has been increased to 12 mw at present with further increases expected in the near future big wind turbines and their associated wind farms have many advantages but also challenges the typical effects are mainly related to the increase in reynolds number and blade flexibility this special issue is a collection of 21 important research works addressing the aerodynamic challenges appearing in such developments the 21 research papers cover a wide range of problems related to wind turbine aerodynamics which includes atmospheric turbulent flow modeling wind turbine flow modeling wind turbine design wind turbine control wind farm flow modeling in complex terrain wind turbine noise modeling vertical axis wind turbine and offshore wind energy readers from all over the globe are expected to greatly benefit from this special issue collection regarding their own work and the goal of enabling the technological development of new environmentally friendly and cost effective wind energy systems in order to reach the target of 100 energy use from renewable sources worldwide by 2050

the commercial air transport industry can be broadly split into three component parts airlines airports and aircraft each of these components is shaped by geography insofar as each is influenced by places landscapes environments people and their various interactions conversely air transport plays a large role in shaping the various themes of geography and the position of our physical human and environmental world it connects people cultures and businesses across every continent and generates economic growth allows international trade to occur and develops tourism it can also be involved in creating negative outputs such as emissions noise and loss of

biodiversity which can have a large impact on the planet and quality of life a lack of air transport links can also have a significantly negative impact on world regions in terms of economic and cultural development in short air transport and geography are inextricably linked fundamentals of global air transport geography details the geography of the global commercial air transport industry the book aims to provide an understanding of these key areas at an introductory level in order to be accessible to students and non technical airport airline management a key theme throughout the book will not only be how geographical issues have influenced air transport but also how air transport continues to influence geography each chapter boasts a range of features aimed at enhancing the reader's understanding including learning objectives discussion questions and case studies and lecturers can find supporting resources including powerpoint slides and teaching notes online

written by a highly regarded author with industrial and academic experience this new edition of an established bestselling book provides practical guidance for students researchers and those in chemical engineering the book includes a new section on sustainable energy with sections on carbon capture and sequestration as a result of increasing environmental awareness and a companion website that includes problems worked solutions and excel spreadsheets to enable students to carry out complex calculations

this book is planned to publish with an objective to provide a state of art reference book in the area of computational fluid dynamics for cfd engineers scientists applied physicists and post graduate students also the aim of the book is the continuous and timely dissemination of new and innovative cfd research and developments this reference book is a collection of 14 chapters characterized in 4 parts modern principles of cfd cfd in physics industrial and in castle this book provides a comprehensive overview of the computational experiment technology numerical simulation of the hydrodynamics and heat transfer processes in a two dimensional gas application of lattice boltzmann method in heat transfer and fluid flow etc several interesting applications area are also discusses in the book like underwater vehicle propeller the flow behavior in gas cooled nuclear reactors simulation odour dispersion around windbreaks and so on

special topic volume with invited peer reviewed papers only

the first volume of a work discussing the state of scientific knowledge of the possible environmental consequences of nuclear war it presents a consensus as to the effects nuclear detonations might have on climate ecosystems and food supply
