real time iterative learning control demonstrates how the latest advances in iterative learning control ilc can be applied to a number of plants widely encountered in practice the book gives a systematic introduction to real time ilc design and source of illustrative case studies for ilc problem solving the fundamental concepts schematics configurations and generic guidelines for ilc design and implementation are enhanced by a well selected group of representative simple and easy to learn example applications key issues in ilc design and implementation in linear and nonlinear plants pervading mechatronics and batch processes are addressed in particular ilc design in the continuous and discrete time domains design in the frequency and time domains design with problem specific performance objectives including robustness and optimality design in a modular approach

by integration with other control techniques and design by means of classical tools based on bode plots and state space

this monograph summarizes the recent achievements made in the field of iterative learning control the book is self contained in theoretical analysis and can be used as a reference or textbook for a graduate level course as well as for self study it opens a new avenue towards a new paradigm in deterministic learning control theory accompanied by detailed examples

this book focuses on adaptive iterative learning control problem for nonlinear time delay systems a universal adaptive learning control scheme is provided for a wide classes of nonlinear systems with time varying delay and input nonlinearity proceeding from easy to difficult this book deals with the adaptive iterative learning control problems for parameterized nonlinear time delay systems non parameterized nonlinear time delay systems nonlinear time delay systems with unknown control direction and nonlinear time delay systems with un measurable states the proposed control schemes can be extended to the adaptive learning control problem for wider classes of nonlinear systems relevant to abovementioned nonlinear systems the topics presented in this book are research hot spots of iterative learning control this book will be a valuable reference for researchers and students working or studying in this area

unveiling the complex dynamic between state sovereignty and necessity doctrine as historically practiced in international political relations this book proposes analytical criteria to assess the lawfulness and legitimacy of interpretations of necessity and national emergency clauses in specialized treaty regimes
