a special workshop on scale problems in hydrology was held at princeton university princeton new jersey during october 31 november 3 1984 this workshop was the second in a series on this general topic the proceedings of the first workshop held in caracas venezuela in january 1982 appeared in the journal of hydrology volume 65 1 3 1983 this book contains the papers presented at the second workshop the scale problems in hydrology and other geophysical sciences stem from the recognition that the mathematical relationships describing a physical phenomenon are mostly scale dependent in the sense that different relationships manifest at different space time scales the broad scientific problem then is to identify and formulate suitable relationships at the scales of practical interest test them experimentally and seek consistent analytical connections between these relationships and those known at other scales for example the current hydrologic theories of evaporation infiltration subsurface water transport and water sediment

transport overland and in channels etc derive mostly from laboratory experiments and therefore generally apply at small space time scales a rigorous extrapolation of these theories to large spatial and temporal basin scales as mandated by practical considerations appears very difficult consequently analytical formulations of suitable hydrologic theories at basin wide space time scales and their experimental verification is currently being perceived to be an exciting and challenging area of scientific research in hydrology in order to successfully meet these challenges in the future this series of workshops was initiated
