the production of carbon dioxide from the oxidation of fossil carbon over the past 200 years has resulted in the accumulation of  $\text{CO}_2$  in the atmosphere.  $\text{CO}_2$  like other greenhouse gases slows the rate at which infrared radiation is emitted from the earth by increasing the concentration of  $\text{CO}_2$  in the atmosphere. Humanity is altering the earth's radiation balance in a potentially dangerous way. Mitigating humanity's impact on earth's climate system requires transforming the global energy infrastructure to decrease anthropogenic emissions of  $\text{CO}_2$ . The body of work presented here covers a range of physical and chemical topics important for the mitigation of anthropogenic climate change through the capture and storage of carbon dioxide. This book is focused primarily on addressing  $\text{CO}_2$  emissions from large stationary point sources through  $\text{CO}_2$  capture and storage. A portion of the work, however, is aimed at addressing the long tail of the  $\text{CO}_2$  point sources distribution by removing  $\text{CO}_2$  directly from the atmosphere. The entire CCS supply chain from the thermodynamic limit of the work required: the capture of  $\text{CO}_2$  from power plants to the long-term chemical and physical evolution of carbon dioxide.
