analog computing is one of the main pillars of unconventional computing almost forgotten for decades we now see an ever increasing interest in electronic analog computing because it offers a path to high performance and highly energy efficient computing these characteristics are of great importance in a world where vast amounts of electric energy are consumed by today s computer systems analog computing can deliver efficient solutions to many computing problems ranging from general purpose analog computation to specialised systems like analog artificial neural networks the book analog computing has established itself over the past decade as the standard textbook on the subject and has been substantially extended in this second edition which includes more than 300 additional bibliographical entries and has been expanded in many areas to include much greater detail these enhancements will confirm this book s status as the leading work in the field it covers the history of analog computing from the antikythera mechanism to recent electronic analog computers and uses a wide variety of worked examples to provide a comprehensive introduction to programming analog computers it also describes hybrid computers digital differential analysers the simulation of analog computers stochastic computers and provides a comprehensive treatment of classic and current analog computer applications the last chapter looks into the promising future of analog computing

in 1999 the ifac ifip workshop on real time programming wrtp joined forces with the workshop on active and real time database systems artdb both series of workshops provide an excellent forum for exchanging information on recent scientific and technological advances and practices in real time computing a field that is becoming an essential enabling discipline of both control engineering and computer science and engineering the annual

workshop on real time programming and the bi annual workshop on active and real time databases systems are intended as meetings of relatively small numbers of experts in their fields taking place as truly international events the 1999 workshop maintained the outstanding quality of both series providing an opportunity to assess the state of the art to present new results and to discuss possible lines of future developments primarily it focused on software development for real time systems real time operating systems and active and real time database systems in particular the technical programme of the workshop covered latest research and developments in requirements engineering software engineering active and real time database systems communication and clock synchronisation embedded systems formal methods operating systems and scheduling out of 58 submissions from 19 countries the international programme committee selected 26 regular papers and 8 reserve papers for presentation at the workshop contributions come from europe north america australia and the far east in addition to these the programme also featured two world renowned keynote speakers and a discussion panel about the state of the art in the field of active real time database systems
