this volume contains 62 articles submitted for presentation at the itc seminar in cracow about thirty percent of the articles are written by authors from eastern europe including six submissions from the soviet union allowing readers to assess the state and level of research in those countries in many cases the articles present important new results among the topics explored by the contributing researchers are network services and evolution network structure and management new information transfer technologies b isdn and atm performance and queueing models high speed lan and man interconnection and fast packet switching networks management and planning of isdn and circuit switched networks and analysis and design of teletraffic systems

within this volume the rapid evolutionary changes currently pervading all telecommunication fields are explored changes in teletraffic technology such as from analog to digital from dedicated systems to service integrated networks insure a steady increase in teletraffic research activities in the near future included in the over 1000 pages of high quality research reports are six

in depth workshops organized by renown experts in the fields of atm stochastic modelling systems engineering and traffic engineering future telecom scenarios teletraffic problems of developing countries and history of teletraffic keynote speakers were given the opportunity of first choices among the papers submitted ensuring excellent quality among the papers included

this book provides technical insights into the use of unique atm technology characteristics to design a cost effective broadband sonet atm network the key network components addressed in the book include information transport signaling and contro transport traffic management and control to prevent the network from congestion and minimize the impacts once the congestion occurs and ntwork restoration after the network component fails it also provides the status of the standardization efforts the unique feature of this book is in its end to end networking approach under a variety of network scenarios including normal network conditions network congestion condition and network failure conditions the book will help network researchers planners and engineers to plan and design cost effective survivable sonet atm networks for emerging telecommunications services as well as future ip over atm networking applications
