close all apps or turn off bluetooth provides minimal improvement because these aren t typically the primary drain sources this guide identifies the specific settings causing your particular battery drain through systematic diagnostics then addresses those specific issues most users discover their battery drain stems from two to three specific problems always location access for apps not requiring it aggressive background app refresh for rarely used apps or display settings calibrated for maximum brightness addressing these specific issues delivers measurable 30 60 improvement within days this probably only works for newer iphones not my older device the guide includes dedicated sections for iphone 14 iphone 13 and earlier models acknowledging their smaller battery capacity and potentially degraded batteries older devices benefit even more from optimization than newer ones a 30 improvement on an iphone 13 might mean the difference between requiring mid day charging versus batteries degraded below 75 capacity guidance helps determine whether 60 80 battery replacement or device upgrade makes economic sense i don t have time to implement complicated technical procedures the one page battery settings checklist in appendix a provides the highest impact optimizations in a 30 minute implementation this checklist alone typically delivers 20 40 battery improvement for most
