production theory and the theory of cost both belong to the central areas of business administration for all considerations concerning the economic organization of industrial manufacturing processes start from these two developments in the past 30 years have had a considerable influence on the structure and the concentration on points of emphasis in this book i am referring to findings from koopmans activity analysis and to the formulation by gutenber of a production function concept that focuses on industrial production processes activity analysis has made it possible to develop from a uniform approach different types of production functions which describe the concrete principles of production in the productive sector of a business enterprise this has created a common

basis for all production concepts in business administration the gutenberg production function with its different kinds of adjustment to a changing output has opened up a flexibility to theoretical and practical considerations that gave rise to a large number of additional studies in this area considerations in cost theory were in particular need of considerable extensions in the direction of cost minimal combined adjustment processes by means of the organization of its contents this book will take both approaches into due account in that way it is vastly different from other books dealing with the same subject as a matter of course traditional analytical methods and ways of thinking also constitute a large part of the book

from the preface the development of manufacturing and the interests closely related to it has seen a corresponding growth in the science of costs nowhere has the application of scientific methods to the productive end of a business yielded larger returns than here the productive sciences are so closely and intimately related to cost reduction that increased production calls for and demands with increase in volume of a product a corresponding decrease in its cost the reasons for this demand are manifold they are at the same time empirical and scientific empiricism arbitrarily demands reduced cost scientific methods show how cost

reduction can be effected contrary to general opinion there is considerable literature extant on the science of costs several works treat the subject from their individual standpoints many papers of great merit have been presented before various engineering auditing and bookkeeping societies and the technical press ever to the fore in disseminating valuable information has been perhaps the most important medium of all for furthering the work all literature on this important subject seems to have been included in either of two classes either an exposition of a working system or systems or an unrelated set of statements concerning the science in this work an attempt has been made to give an exposition of the science from a broad standpoint applicable to any business to arrange the elements in logical order giving due weight to proper authorities to unify and blend the whole so as to furnish true information to the student of the science and at the same time not be too elementary for the experienced cost expert finally a number of cost systems with forms have been added as operated by various experts in this particular line with the idea of making a work of real worth to those wishing exact information on this subject careful search has been made of all the available literature on the subject a large number of manufacturing plants have been investigated and numerous personal interviews have been had with those conversant with the subject of costs in order to secure the information necessary for a work of this character it is hoped that the information here set forth will be found of service and add its required quota to the upbuilding of the business sciences at the same time maintaining the high standard set by the preceding volumes of the business man s library of which this book is the third number the author

the cost of production by burt clifford bean delves into the science of costs and its practical application across diverse manufacturing sectors first published in 1905 this foundational work explores the principles underlying cost determination offering insights into how businesses can accurately assess and manage their production expenses featuring illustrative examples from cost experts the book elucidates various costing methodologies relevant to different lines of manufacturing it is an invaluable resource for those seeking a comprehensive understanding of cost accounting and its impact on industrial management this historical work remains relevant for students and professionals interested in the evolution of cost accounting practices and the fundamental concepts that continue to shape modern business strategies this work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it this work was reproduced from the original artifact and remains as true to the original work as possible therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work this work is in the public domain in the united states of america and possibly other nations within the united states you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work as a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public we appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant

excerpt from the cost of production to devise a simple effective and economical system for securing accurate factory costs is a problem many manufacturers have yet to solve in these days of fierce competition the average maker of a standard line of goods is tempted to use the selling prices of his competitors as a guide in determining his own but he cannot be certain that the result obtained by this means will ensure a profit under the conditions peculiar to his factory he is at all times confronted with the idea that his competitors may be more progressive and that the systems employed by them may facilitate the operations in their factories and thus reduce the cost of production with this uncertainty of his competitors methods and systems he cannot with safety base his cost simply on their selling prices about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
