analog cmos microelectronic circuits describes novel approaches for analog electronic interfaces design especially for resistive and capacitive sensors showing a wide variation range with the intent to cover a lack of solutions in the literature after an initial description of sensors and main definitions novel electronic circuits which do not require any initial calibrations are described they show both ac and dc excitation voltage for the employed sensor and use both voltage mode and current mode approaches the proposed interfaces can be realized both as prototype boards for fast characterization in this sense they can be easily implemented by students and researchers and as integrated circuits using modern low voltage low power design techniques in this case specialist analog microelectronic researchers will find them useful the primary audience of analog cmos microelectronic circuits are analog circuit designers sensor companies ph d students on analog microelectronics undergraduate and postgraduate students in electronic engineering

luis moura and izzat darwazeh introduce linear circuit modelling and analysis applied to both electrical and electronic circuits starting with dc and progressing up to rf considering noise analysis along the way avoiding the tendency of current textbooks to focus either on the basic electrical circuit analysis theory dc and low frequency ac frequency range or on rf circuit analysis theory or on noise analysis the

authors combine these subjects into the one volume to provide a comprehensive set of the main techniques for the analysis of electric circuits in these areas taking the subject from a modelling angle this text brings together the most common and traditional circuit analysis techniques e g phasor analysis with system and signal theory e g the concept of system and transfer function so students can apply the theory for analysis as well as modelling of noise in a broad range of electronic circuits a highly student focused text each chapter contains exercises worked examples and end of chapter problems with an additional glossary and bibliography for reference a balance between concepts and applications is maintained throughout luis moura is a lecturer in electronics at the university of algarve izzat darwazeh is senior lecturer in telecommunications at university college london previously at umist an innovative approach fully integrates the topics of electrical and rf circuits and noise analysis with circuit modelling highly student focused the text includes exercises and worked examples throughout along with end of chapter problems to put theory into practice

today most if not all microelectronic circuit design is performed with the aid of a computer aided circuit analysis program spice has become the industry standard software for computer aided circuit analysis for microelectronic circuits this text is ideal as a companion to sedra andsmith s microelectronic circuits third edition but is also a very effective stand alone tutorial text on computer aided circuit analysis using spice
