understanding basin fill evolution and the origin of stratal architectures has traditionally been based on studies of outcrops well and seismic data studies of and inferences on qualitative geological processes and to a lesser extent based on quantitative observations of modern and ancient

sedimentary environments insight gained on the basis of these studies can increasingly be tested and extended through the application of numerical and analogue forward models present day stratigraphic forward modelling follows two principle lines 1 the deterministic process based approach ideally with resolution of the fundamental equations of fluid and sediment motion at all scales and 2 the stochastic approach the process based approach leads to improved understanding of the dynamics physics of the system increasing our predictive power of how systems evolve under various forcing conditions unless the system is highly non linear and hence difficult or perhaps even impossible to predict the stochastic approach is more direct relatively simple and useful for study of more complicated or less well understood systems process based models more than stochastic ones are directly limited by the diversity of temporal and spatial scales and the very incomplete knowledge of how processes operate and interact on the various scales the papers included in this book demonstrate how cross fertilization between traditional field studies and analogue and numerical forward modelling expands our understanding of earth surface systems

there is a growing problem of performance degradation of wells and associated systems on sites where groundwater quality is monitored or remediation performed this book acts as a valuable guide in keeping monitoring and pumping well systems operating to their best capacity it addresses the need for and methods of environmental well maintenance and restoration this guidebook to the causes of well deterioration methods of well maintenance and well restoration or well rehabilitation methods offers methods for prevention and control of deterioration if you are a consumer of professional services in well rehabilitation this book will help you get the most from your professional help it you are a provider it is an important source of information intended to help you do your job better and more safely

this book written by 33 stratigraphic experts presents various processes available which will enable the location in time of all rock types sedimentary metamorphic plutonic and eruptive whether they are in outcrop or at subsurface the terminology and the appropriate practices for each method are presented in separate chapters and illustrated with concrete examples the order of the chapters is modeled on the progression of the stratigraphic process from the descriptive to the interpretative from the methods of the geometric stratigraphy lithostratigraphy and genetic stratigraphy chemostratigraphy magnetostratigraphy to the chronological stratigraphy biostratigraphy followed by the chronometric stratigraphy isotopic geochronology the final two chapters are dedicated to chronostratigraphic units and correlations which combine the contributions of various methods and to the presentation of the 2007

version of the geological time scale the definitions of stratigraphic terms can be found in a glossary at the end of the work the book is addressed to all professional geologists from the industrial sector as well as those in universities including teachers and researchers who would like to deepen their knowledge of the vocabulary the concepts the methods and the practical applications of different approaches of stratigraphy a reference discipline for the entirety of the geological sciences
