the over all aim of the book is to collect and add to the information published already on
the larger benthic foraminifera and in cases their associated algae many decades of
research in the far east to some extent in the middle east and americas has lead to
numerous articles with confused systematics therefore with the aid of new and precise
age dates from calcareous nannofossils and sr isotopes the current schemes of the larger
foraminifera in a relatively precise chronostratigraphic and sequence stratigraphic
framework are revised this is achieved by 1 establishing the systematic and occurrences
of larger foraminifera from carbonate rocks in successions covering the carboniferous to

miocene with careful taxonomic comparison with the known records in the different bioprovinces 2 illustration fossils of different families and groups at generic levels 3 illustrations of important species and comparing distributions of different taxa the inventory of larger benthic foraminifera focuses on the main important groups and the illustration of their genera reviews of the global state of the art of each group are complemented with the new data and the direct palaeobiogeographic relevance of the new data is analyzed a unique comprehensive reference work on the larger foraminifera a documentation of the biostratigraphic ranges and palaeoecological significance of larger foraminifera which is essential for understanding many major oil bearing sedimentary basins the palaeogeographic interpretations of the shallow marine late palaeozoic to cenozoic world

a volume in the american college of laboratory animal medicine series this second edition has over 40 new material including the addition of six new topics and many others that are completely rewritten the book comprehensively covers the biological and disease aspects of laboratory animal medicine while examining other aspects such as the biohazards associated with the use of animal experimentation and factors complicating the bioethics of animal research
