modern mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems thus it is par excellence a model of rational inquiry links between cognitive psychology and mathematics education have been particularly strong during the last decades indeed the enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference yet these deviations should not be called errors as cognitive psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats

humans as the cognitive psychologist and economist herbert simon claimed do not usually optimize but rather satisfice even when solving problem this research topic aims at demonstrating that these insights have had a decisive impact on mathematics education we want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program in simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

here is a collection of unusual problems and puzzles which are designed to help students develop their capacity to think through difficult mathematical problems in an enjoyable and challenging way the problems are grouped into 29 sections each developing a single theme with each section followed by a commentary suggesting ideas and approaches that students can try advanced math is not required and most sections are accessible to younger students the emphasis is on intuitive and investigative approaches which can stimulate individual creativity and provide a focus for group discussion and learning
