the sensory profile provides a standard method for professionals to measure a child's sensory processing abilities and to profile the effect of sensory processing on functional performance in the daily life of a child. It is a judgment-based caregiver questionnaire. Each item describes children's response to various sensory experiences. The caregiver who has daily contact with the child completes the questionnaire by reporting the frequency with which these behaviors occur. Therapist or other professional then scores the responses on the questionnaire.

When a child with an autism spectrum disorder is also visually impaired, the effects on learning and behavior are complex and varied. Two exceptional educators condense their years of personal and professional experience into a one-of-a-kind handbook of effective ways to work with such students, including suggestions and approaches for assessment, instruction, and program planning. Forms and tools for capturing vital information, information on assessment instruments, instructional materials, and web sites rich in important advice for professionals and educators, as well as parents, will find critical guiding principles and valuable strategies.

The handbook of infant, toddler, and preschool mental health assessment brings together for the first time leading clinical researchers to provide empirically based recommendations for assessment of social, emotional, and behavior problems and disorders in the earliest years. Each author presents state-of-the-art information on scientifically valid, developmentally based clinical assessments and makes recommendations based on the integration of developmental theory, empirical findings, and clinical experience. Though the field of mental health assessment in infants and young children lags behind work with older children and adults, recent scientific advances, including new measures and diagnostic approaches, have led to dramatic growth in the field. The editors of this exciting new work have assembled an extraordinary collection of chapters that thoroughly discuss the conceptualizations of dysfunction in infants and young children, current and new diagnostic criteria, and such specific disorders as sensory modulation dysfunction, sleep disorders, eating and feeding disorders, autistic spectrum disorders, anxiety disorders, posttraumatic stress disorder, and ADHD. Chapters further highlight the importance of incorporating contextual factors such as parent-child relationship, functioning, and cultural background into the assessment process to increase the validity of findings. Given the

comprehensiveness of this groundbreaking volume in reviewing conceptual methodological and research advances on early identification diagnosis and clinical assessment of disorders in this young age group it will be an ideal resource for teachers researchers and a wide variety clinicians including child psychologists child psychiatrists early intervention providers early special educators social workers family physicians and pediatricians
