Many North American students will not learn multiplication until grade 3, but many Asian countries and areas learn times table at grade 2 so there is one year of the difference of learning ahead in China. This workbook has brought its standard to meet the highest possible math curriculum in the world so four operations of

computation appear in this workbook the earlier the students could master the skills of four basic operations the more the students could explore many possibilities of word problem computation problems with this in mind how does the very popular math kangaroo contest test the grade 1 and grade 2 students how is it different from other math contests math kangaroo contest the math kangaroo grades 1 and 2 contest almost does not include the direct math computation problems which are very different from the math contests in china where direct computation problems could include skilful computation problems i analyzed the most recent years of canadian math kangaroo contest grade 1 and 2 problems and they start to emerge some characteristics and categories so i include here to help students prepare for it the lower grade math contest tends to skew to the more visual operation type of problems the problems could be classified as follows many of the following problems are not typical problems appeared in the books where you can buy from a bookstore because the problems in the math contests are much more complicated and involve a lot of creativities number relationships mixed computation placing numbers in empty spaces logic problems geometry missing part of a figure or dividing a figure symmetry rotation counting figures and angles arrangement and combination pattern substitution method number puzzles including filling numbers into empty spaces

started to compare their teaching materials with our north american materials at the same time i researched the materials from singapore taiwan and puzzles from japan and britain these analytical researches have led me to have an idea to combine all my published workbooks into one large workbook which includes math contest problems iq fitness word problems and chess and math integrated worksheets this workbook is unique and one of a kind it also represents my idea of showcasing why math is fun to children and my ideas of using inquiry and conceptual teaching 之后 reinforced by procedural practices 之后 i have used many of these worksheets on my own students in my classes and witnessed their feedback most children do not want to do just computation problems for 2 hours very few students like to work on math contest problems for 2 hours continuously so puzzles and chess problems are fun for them for a change

this text contains listings of hundreds of competitions designed to benefit youth in educational civic social and ethical development listed are american and international contests that promote creativity and excellence for students between the ages of 8 18

this book contains 10 amc 10 style tests problems and solutions the author tried hard to create each test similar to real amc 10 exams some of the problems in this book were inspired by problems from american mathematics competitions 10 and china math contest the author also tried hard to create some new problems we field tested the problems in this book with students in our 2015 mathcounts state competition training groups we would like to thank them for the valuable suggestions and corrections we tried our best to avoid any mistakes and typos if you see any mistakes or typos please contact mymathcounts gmail com so we can make improvements to the book

i have been teaching math to kindergarten to grade 12 students for the past 21 years every night 7 days a week at the ho math chess learning centre based in vancouver canada i have encountered many problems including some of the followings the traditional computation worksheet format is boring many research papers have been published to show us how to teach math but when it comes to having some practice sheets the choices are few and far between none of them could have any earth shattering styles i teach in an environment which is very different from regular day schools because i could have students ranging from grade 1 to grade 6 all in one class although i tried hard to have a similar background of students gathered together sometimes it is not possible

because students have other lessons to go to most of my students have after school classes almost every day some students can only do very basic calculation sheets yet some of them need to be challenged on advanced word problems including math contest problems how can i teach students with such a diversified background children not only need to learn math but some of them also need to do puzzles to activate their brains and increase their iq with the above in mind i created many separate workbooks including basic calculation word problems puzzles and i even incorporated chess moves into my math worksheets with all these efforts ironically i created an additional problem for myself which i have to use 4 workbooks to teach one child in 2015 i started to pay attention to chinese after school learning centre s teaching materials and started to compare their teaching materials with our north american materials at the same time i researched the materials from singapore taiwan and puzzles from japan and britain these analytical researches have led me to have an idea to combine all my published workbooks into one large workbook which includes math contest problems iq fitness word problems and chess and math integrated worksheets
