circadian rhythms are biological processes displaying endogenous and entrainable oscillations of about 24 hours they are driven by a group of genes called clock genes that have been widely observed in plants animals and even in bacteria in mammals the core clock genes are rhythmically expressed in both the suprachiasmatic nucleus scn the master clock residing in the hypothalamus and almost all peripheral tissues where they control numerous target genes in a circadian manner and thus affect many physiological and biochemical processes evidence suggests that disruption of the circadian rhythms or desynchronization is a significant risk factor for the development of metabolic diseases cardiovascular diseases cancer and sleep disorders evidence also suggests that the disruption suppresses immune function and increases vulnerability to infectious diseases restoring or strengthening the circadian rhythm may be therapeutic for these conditions this becomes exceptionally important in modern societies because many people are suffering from frequent desynchronization due to shift working exposure to artificial light travel by transmeridian air flight and involvement in social activities besides the temporal variations in the incidence and severity of many diseases such as the onset of cardiovascular events chronic obstructive pulmonary disease copd inflammatory diseases and mental disorders have also drawn increasing attention to the circadian clock the circadian rhythms affect not only the health status but also the drug efficiency the effects and side effects of many drugs vary with biological timing the tolerance of many medications displays circadian variation as well the timing of medical treatment in coordination with the body clock may significantly increase the desired effects of drugs and lower the dose and toxicity in addition circadian rhythms can

also be modulated by some therapeutic drugs for example melatonin and modafinil which are used to treat circadian rhythm sleep disorders in this research topic we assemble a series of critical review and research articles that focus on the therapeutic implications of circadian rhythms topics include but are not limited to circadian disruption caused diseases or disorders and related intervention temporal manifestation of diseases or disorders and therapeutic implications the effects of circadian rhythms on drugs the effects of drugs on circadian rhythms

this collection features four peer reviewed reviews on integrated pest management ipm in cereal cultivation the first chapter describes a holistic approach to ipm using knowledge of the natural regulation of herbivore and weed populations and of natural succession in agricultural wetlands it also highlights the need for an improved understanding of rice ecosystems in a holistic manner to ensure the economic and environmental sustainability of rice production the second chapter provides a brief overview of ipm and reviews the range of control methods available to growers including biological cultural and chemical the chapter considers the implementation of ipm programmes in wheat production and utilises a case study from new zealand to demonstrate a successful example of it the third chapter discusses key insect pests of sorghum their life cycles and their impact on crop productivity and performance the chapter reviews the use of ipm programmes as a sustainable alternative to controlling pest infestations without the need for insecticides the final chapter examines host plant resistance as an ecological approach to managing crop pests and considers the process of evaluating resistance on the basis of insect behavior the chapter also looks at breeding rice for resistance to insect pests and considers the constraints on the development and deployment of insect resistant plant technology
