this book provides insights into contemporary issues and challenges concerning operational research and related mathematical modeling fundamentals such as system reliability scalability and adaptability this collaboration of academia and industry disseminates practical tools and analytics applications of mathematics in engineering and information sciences optimization techniques have gained popularity among system managers for making crucial decisions while meeting multiple needs the focus of this book is the evaluation and optimization of critical decisions related to the system betterment each chapter presents the recent advancements and research opportunities in system assurance operational perspective of modeling system reliability research tools for system dynamics is for academicians and those who need to understand the latest developments in the field of system reliability along with these anyone solving problems within the related application domains will benefit from this compilation

over the past two decades many advances have been made in the decision support system dss field they range from progress in fundamental concepts to improved techniques and methods to widespread use of commercial software for dss development still the depth and breadth of the dss field continues to grow fueled by the need to better support decision making in a world that is increasingly complex in terms of volume diversity and interconnectedness of the knowledge on which decisions can be based this continuing growth is facilitated by increasing computer power and decreasing per unit computing costs but it is spearheaded by the multifaceted efforts of dss researchers the collective work of these researchers runs from the speculative to the normative to the descriptive it includes analysis of what the field needs designs of means for meeting recognized needs and implementations for study it encompasses theoretical empirical and applied orientations it is concerned with the invention of concepts frameworks models and languages for giving varied helpful perspectives it involves the discovery of principles methods and techniques for expeditious construction of successful dsss it aims to create computer based tools that facilitate dss development it assesses dss efficacy by observing systems their developers and their users this growing body of research continues to be fleshed out and take shape on a strong but still developing skeletal foundation

this book constitutes the refereed proceedings of the 25th international static analysis symposium sas 2018 held in freiburg germany in august 2018 the 18 papers presented in this volume were carefully reviewed and selected from 37 submissions the contributions cover a variety of multi disciplinary topics in abstract domains program verification bug detection compiler optimization program understanding and software maintenance

cities can only exist because of the highly developed systems which underlie them ensuring that energy clean water etc are moved efficiently from producer to user and that waste is removed the urgent need to make the way that these services are provided more environmentally socially and economically sustainable means that these systems are in a state of transition from centralized to decentralized energy from passive to smart infrastructure from toll free to road pricing such transitions are widely studied in the context of the influence of service providers users and regulators until now however relatively little attention has been given to the growing role of intermediaries in these systems these consist of institutions and organizations acting in between production and consumption for example ngos who develop green energy labelling schemes in

collaboration with producers and regulators to guide the user consultants who advise businesses on how to save resources and travel agents who match users with providers such intermediaries are in a position to shape the direction that technological transitions take and ultimately the sustainability of urban networks this book presents the first authoritative collection of research and analysis of the intermediaries that underpin the transitions that are taking place within urban infrastructures showing how intermediaries emerge the role that they play in key sectors including energy water waste and building and what impact they have on the governance of urban socio technical networks
