abstract analysis is given of the omega point cosmology an extensively peer reviewed proof i e mathematical theorem published in leading physics journals by professor of physics and mathematics frank j tipler which demonstrates that in order for the known laws of physics to be mutually consistent the universe must diverge to infinite computational power as it collapses into a final cosmological singularity termed the omega point the theorem is an intrinsic component of the feynman dewitt weinberg quantum gravity standard model theory of everything toe describing and unifying all the forces in physics of which itself is also required by the known physical laws with infinite computational resources the dead can be resurrected never to die again via perfect computer emulation of the multiverse from its start at the big bang miracles are also physically allowed via electroweak quantum tunneling controlled by the omega point cosmological singularity the omega point is a different aspect of the big bang cosmological singularity the first cause and the omega point has all the haecceities claimed for god in the traditional religions from this analysis conclusions are drawn regarding the social ethical economic and political implications of the omega point cosmology

this book explores intersections of science and religion spirituality and technology engineering and science fiction mind and matter and outlines a new cosmic transhumanist religion hacking religion enlightening science awakening technology

in recent years ideas of post and transhumanism have been popularized by novels tv series and hollywood movies according to this radical perspective humankind and all biological life have become obsolete traditional forms of life are inefficient at processing information and inept at crossing the high frontier outer space while humankind can expect to be replaced by their own artificial progeny posthumanists assume that they will become an immortal part of a transcendent superintelligence krüger s award winning study examines the historical and philosophical context of these futuristic promises by ray kurzweil nick bostrom frank tipler and other posthumanist thinkers

alien life and human purpose a rhetorical examination through history provides a rhetorical examination of the way major historical figures connect their arguments for the absence of alien life or unity to their philosophical religious and ethical agendas although the unity myth has often existed in the background of society shaping institutions and values during periods where relativism gained prominence its opponents actively wielded the unity myth as a response plato used the unity myth against the sophists anglican theologian and philosopher william whewell against the utilitarians co discoverer of evolution alfred russell wallace against the social darwinists university professors frank j tipler and john d barrow against the postmodernists etc these individuals presented scientific defenses of unity and then used the fact of unity to claim the universe is teleological knowable and ordered rather than chaotic and relativistic this book argues that unity and its complimentary mythic function have played an important role in shaping values throughout history and more

importantly continue to do so today

does matter matter the scientific picture of the end of the physical universe has undergone dramatic changes since the turn of the 21st century with its future characterized by accelerated expansion and futility yet christian theology has been largely silent on this despite the interest in eschatology in popular culture and in theology itself what can christian theology learn from and contribute to the scientific picture of the future of the universe can the biblical narratives of creation and new creation have a fruitful dialogue with scientific discoveries david wilkinson shows what a fruitful dialogue this can be critiquing the folk eschatology of the left behind series the misguided faith of the scientific optimists and the lack of scientific engagement of the theologians of hope wilkinson argues for a rediscovery of the theological theme of new creation and the centrality of bodily resurrection

did the universe originate from a big bang as argued by leading astrophysicists and others or does some other theory more accurately describe its beginnings are there other forms of life in the universe what about other universes this volume discusses these and other topics in this hotly debated area where philosophy and science meet
