comprehensive introduction to manufacturing process planning in the context of the latest techniques being used in industry manufacturing process planning is a comprehensive guide to the intricacies of the manufacturing planning process that leads readers through each stage of planning while providing practical examples that illustrate the manufacturing activities taking place at every juncture beginning with the fundamentals the book bridges the gap between technical documents and product specifications and how the information they contain can be effectively applied on the shop floor the focus of this book is honed around four key areas selection of manufacturing processes process planning in sand casting process planning in machining and process planning in inspection each chapter highlights best practices for activities such as casting mold design machining sequence identification geometrical validation cnc programming the preparation of inspection reports and more special attention is paid to manufacturing cost estimation and pricing ensuring that the production process is not only feasible but also cost effective to enhance the learning experience the book comes complete with an active learning project brief and tutorial sessions covering casting simulation pattern design and cnc simulation using freely available software manufacturing process planning includes information on fundamentals of casting from heating the metal to pouring the molten metal to solidification and cooling to determining casting quality and performing cleaning operations definition and selection of workholding systems covering principles of workholding types of workholding systems and general purpose of workholding devices for turning and milling machine and cutting tool selection and process parameter selection covering specific guidelines in turning milling and drilling documents for process planning including process flow charts routing sheets and operation and tooling lists providing a hands on approach to mastering the principles of manufacturing process planning manufacturing process planning is an ideal resource for undergraduate and graduate academic courses that incorporate a lab component as well as production planning supervisors and managers looking to hone their knowledge base

this book includes state of the art and original research contributions from two well established conferences which collectively focus on the joint design development and management of products advanced production systems and business for sustainable customization and personalization the book includes wide range of topics within these subjects ranging from industrial success factors to original contributions within the field the authors represent worldwide leading research institutions

the urgent need to keep pace with the accelerating globalization of manufacturing in the 21st century has produced rapid advances in manufacturing research development and innovation this book presents the proceedings of the 15th international conference on manufacturing research icmr 2017 which also incorporated the 32nd national conference on manufacturing research ncmr and was held at the university of greenwich london uk in september 2017 the conference brings together a broad community of researchers who share the common goal of developing and managing the technologies and operations key to sustaining the success of manufacturing businesses the book is divided into 13 parts covering topics such as advanced manufacturing technologies including additive ultra precision and nano manufacturing manufacturing systems digital and cyber physical systems product design and development including lifecycle management and supply chain collaboration information and communication including innovation and knowledge management and manufacturing management including lean sustainable and cost engineering with its comprehensive overview of current developments this book will be of interest to all those involved in manufacturing today

the development and management of technologies and operations are key to the success of all types of manufacturing business this book presents the proceedings of the 17th international conference on manufacturing research icmr 2019 held in belfast uk on 10 12 september 2019 icmr has been the uk s main manufacturing research conference for 34 years and an international conference since 2003 it brings together researchers academics and industrialists to share their vision knowledge and experience and discuss emerging trends and new challenges in manufacturing research the conference theme of icmr2019 was smart manufacturing and the book includes the 82 papers presented at the conference representing an acceptance rate of 69 these have been divided into 13 parts which cover topics ranging from robot automation and machining processes additive manufacturing composite manufacturing design methods to information management

quality control production optimization and product lifecycle management providing an overview of current trends and developments the book will be of interest to researchers and engineers in the relevant area of manufacturing processes design and production management

this handbook provides an introduction to modern manufacturing techniques explaining their concepts and capabilities it covers employee empowerment total quality management quality systems iso 9000 and qs 9000 total preventative maintenance just in time manufacturing computer simulations process re engineering and project management

the evolution and execution of automotive manufacturing are explored in this fundamental manual it is an excellent reference for entry level manufacturing engineers and also serves as a training guide for nonmanufacturing professionals the book covers the major areas of vehicle assembly manufacturing and addresses common approaches and procedures of the development process having held positions as both a university professor and as a lead engineering specialist in industry the author draws on his experience in both theory and application to fill the gap between academic research and industrial practices this concisely written comprehensive review discusses the sophisticated principles and concepts of automotive manufacturing from development to applications and includes 250 illustrations and 90 tables end of chapter review questions research topics for in depth case studies literature reviews and or course projects analytical problems for additional practice directly extracted and summarized from automotive manufacturing practices this book serves as an essential manual the subject is complemented by the author s first book automotive vehicle assembly processes and operations management which provides even greater depth to the complex endeavor of modern automotive manufacturing
